GET WHEYSTED SUPPLEMENTS

GWS-ERP User Guide

How to use the system: sales, inventory, audit, HR and accounting.
Guide for everyone, then a step-by-step guide for each role.

Version of 2026-10-16

Contents

PART 1 · GUIDE FOR EVERYONE

Signing in and your account
Dashboard and notifications
Menus by role (quick start)
Help & Guide and the Ask box
Recording a sale
Online, card, delivery and shipping sales
Special prices (below the list price)
Voiding or correcting a sale
Customer contacts
AR / credit sales and collecting payments
Branch expenses
Cash fund
Daily close, cash count and bank deposit
Daily Sales Report
Editing a DR before the day closes, and the DR list of the Daily Sales Report
Inventory Reports: from a Sales figure to its DRs and its Daily Sales Report
Submitting today's Daily Sales Report (branch staff)
Requesting stock from the warehouse (branch)
Receiving a transfer at your branch
When the received quantity is different from the form
Pull-outs and returns from a branch
Warehouse: receiving supplier deliveries
Warehouse: sending stock
Warehouse In-Charge: correcting an associate's entry
Stock on hand and expiry dates
Expiry and alerts
Weekly count sheet (sales associates)
Audit count (auditors and Field Auditor)
Discrepancy cases, countdown and explanations
Write-offs: expired and damaged items
Store inspection report
Approvals
Approval workflow and your requests
New products, suppliers and other main records (Owner approval)
Editing and deleting products and back-office data
Price update notices
HR: new employees and their user accounts
Warehouse: In-Charge approval of stock in and out
Franchise owner: staff pay, charges and books
Bank & Office (Executive Assistant)
Accounting: editing journal entries
Company letterhead and logo (Admin)
Corrections by the Audit Associate and the Revision Log
Your charges and pay (My Pay & Charges)
HR: charge forms
HR: payroll and government contributions
HR: weekly count compliance
Products, prices and price changes
Suppliers and imports
Consignment
Franchise portal
Accounting
Financial statements
Users, audit log and settings (Admin)
Inventory reports: item search and items with movement first
Freebies received from suppliers
Incentive paid from a sale
Cash on hand (sales cash not yet deposited)
HR notices (Notice to Explain)
Product cost and days to consume
Customer contacts and re-order follow-ups
E-commerce: TikTok, Shopee and Lazada
Dashboard: today's sales and cash on hand (branch staff)
Sales targets, Sales Manager and Agents
Agent field work: outlets, itineraries, photos and consignments
Tagging a sale to an agent's outlet
Wheysted members: customers with a QR card
Wheysted member program: points, vouchers, member prices and more
Customer Service: the branch to-do list, and what customers tell us
Promos: for all branches, or separately for the franchises
Replacement price difference: how it was paid, and the day
Choosing items from a search box
Email and SMS campaigns
Searching any list
Searching your notifications

Opening AR: customer credit from before GWS-ERP
Faster approvals: tick all
Finding transfers, and franchises in every list
Flavors and expiry dates: choosing the right item
Checking a sale before it is saved
Agent incentives
The Owner may approve anything
Changing a closed day (post-close edit)
Your password
Credit-card and e-commerce prices
6-Pack Card
Franchise AR (what franchises owe GWS)
Memorandums
Bank deposit slip and verification
E-commerce margin analysis and waybill report
Selling to a franchise: price, plastic and shipping
E-commerce: the "To ship" export becomes the pick list
Deleting an unfinished draft
The forms behind a stock movement
Printed forms: the checker's column
Marketing and BO pull-outs
Replacement tickets
Restock & Purchase Orders
Franchise availability and orders (from the warehouse stock to a DR)
Franchise DRs: connected to the franchise
Franchise AR: Unpaid goods, shipping, penalty and interest
Branch requests to the warehouse
Promos: percentage, internal quantity and the promo tick
Proof of payment: upload it once, it prints with the report
Page names and what each page is for
Sales Report and Sales Graphs
Form numbers
Who can see supplier cost

Franchise Sales Associate
Franchise Owner
Accounting Head
Accounting Associate
HR Staff
Executive Assistant
External Auditor
Admin (Owner)
E-comm Associate
Sales Manager
Agent
Franchise Coordinator
Asst. Franchise Coordinator
Other users (custom permissions)

APPENDIX

Sample accounts and password

Part 1 · Guide for everyone

This guide explains how to use GWS-ERP, the Get Wheysted Supplements system for sales, inventory, audit, HR and accounting. Inside the app, open **Help & Guide** in the menu: it shows only the parts that apply to your role, and you can type a question in the **Ask** box.

Each section below starts with a hidden line that says which roles it is for. The Help page uses it to show each person only what they can do.

> **Tip.** Inside the app, **Help & Guide** shows only the parts for your role, and the **Ask** box answers questions. The **Picture guide** shows where to click.

Signing in and your account

- Open the system in your browser (on the office Mac it is http://localhost:5173) and sign in with your username or email and your password.
- **Your first sign-in:** you set your own password (at least 10 characters), then read the accountability statement with your name and company ID, tick the box and press **I accept**. Nothing else works until you do.
- **One person per account.** Never share your password. Everything you do is recorded with your name and ID.
- **One device at a time.** If you sign in on another phone or computer, the first one is signed out and you get a notification. If you are signed out unexpectedly, someone else may be using your account: tell Admin.
- **Authenticator code.** Admin, the External Auditor, the Head Auditor and the Accounting Head may be asked for a 6-digit code from an authenticator app (Google Authenticator or Microsoft Authenticator). During testing the code is switched off.
- **Signed out after a while?** Sessions end after a period of no activity (longer for sales and franchise staff). Just sign in again.
- **Forgot your password?** Ask Admin to set a temporary one under Users & Roles. You will be asked to change it when you sign in.

Dashboard and notifications

- **Dashboard** is your home page. It shows what needs your attention for your role: today's sales, open AR, approvals waiting for you, critical stock, expiring stock, cash fund balances, your charges, and alarms.
- **Red boxes need action now.** For example the weekly count sheet alarm, or the number of days left before a discrepancy is charged to you (in bold red).
- **The bell** (top right) lists your notifications: approvals you need to give, stock requests, charges, revisions of your documents, and so on. Click one to open the document.
- **Approvals** in the menu shows a badge with how many requests are waiting for you.

Menus by role (quick start)

- **Sales Associate:** New Sale, Sales List, AR & Collections, Expenses, Daily Close & Deposit, Cash on Hand, Petty Cash Fund, Transfers & Pull-outs (request stock and receive), Stock Counts (weekly sheet), Count Discrepancies, Stock on Hand, Daily Sales Report, My Pay & Charges.

- **Warehouse Associate / In-Charge:** Receiving, Transfers (send stock), Stock on Hand, Inventory Count, Write-offs, Expiry & Alerts.
- **Head Auditor / Asst Auditor:** Approvals, Receiving costs, Discrepancies, Inventory Count, Revision Log, Cash Fund, Store Inspections, all reports with cost.
- **Audit Associate:** branch reports with cost, correction requests (approved by the Head Auditor), Revision Log.
- **Field Auditor:** Inventory Count (audit sheets), Cash Fund (confirm the cash found), Store Inspections, Stock on Hand and expiries of every branch and franchise. No cost, no sales.
- **HR Staff:** Staff Charges, Payroll, Weekly Count Check, HR Notices (NTE), Agent Incentives (release forms), Store Inspections, Revision Log.
- **Accounting Head / Associate:** AR approvals, opening AR entry, Agent Incentives (release tagging), Accounting menus, Inventory Cost, cash funds, payroll (the Associate sees totals only).
- **Sales Manager:** Sales Targets, Agent Incentives, Sales Report and Graphs, AR of dealers, franchises and agents. No cost.
- **Agent:** My Sales and Agent Incentives: own sales at every branch, target and incentive. No cost.
- **E-comm Associate:** E-commerce (TikTok, Shopee, Lazada).
- **Executive Assistant:** Bank & Office.
- **Franchise Owner / Associate:** Franchise Portal, sales and stock of their franchise.
- **Admin (Owner):** everything, including Users & Roles, Settings and final approvals.

Help & Guide and the Ask box

- Open **Help & Guide** in the menu. You see only the sections for your role. Use the search box to filter them.
- Type a question in **Ask** (for example "how do I record a delivery sale?"). If the AI assistant is switched on, it answers from this guide in plain words. If not, the matching guide sections are shown instead.
- The assistant only explains how to use the system. It cannot see or change your data, and it does not know your sales or stock figures.
- **Picture guide (screenshots)** (button at the top of Help & Guide): each process with screenshots, numbered red boxes on where to click and the matching steps; it has a printable PDF.

Recording a sale

1. Open **New Sale**.
2. Type the **DR / SI number** from the paper receipt.
3. Choose the **channel**: Walk in, Delivery, Shipping, Online marketplace, Prothin Dealer, Agent, Franchise.
4. Choose the **payment**: Cash, Online (GCash / bank), Credit card, or AR/PDC (on credit).
5. Search the product by name or SKU and click it. Only items your branch has on hand are listed, with the quantity. If the item comes in more than one **flavor or expiry date**, a list opens: choose the one you are selling. Then set the quantity. The price for the channel fills in by itself.
6. Optional: customer name, **contact number** and **email** (these build the Customer Contacts list).
7. Press **Review sale**, check every detail on the review screen, then **Confirm and save sale** (or **Go back and edit**). The stock is deducted at once, from the flavor / expiry you chose.

- A red "near expiry" tag means the batch expires soon; sell it first.
- Freebies and plastic bags go in at zero price.

Online, card, delivery and shipping sales

- **Online payment** (GCash, bank transfer): pick the receiving account and upload a photo or screenshot of the proof of payment. The sale will not save without them.
- **Credit card:** fill in the MID, slip number, approval code and batch number from the card terminal slip.
- **Delivery:** pick the rider and type the delivery fee and rider incentive.
- **Shipping / marketplace:** type the shipping fee charged, the shipping expense and marketplace charges.

Special prices (below the list price)

- You can sell below the price for the channel. The sale saves, and Admin gets a **Special price** approval.
- Admin sees the list price, the price sold, the discount and the margin, then approves or rejects. A rejected special price is reported to the auditors.

Voiding or correcting a sale

- **Same day:** open the sale, type the reason, press **Void sale**. The stock goes back.
- **After the day is closed** (every day closes at midnight Manila time): the void is refused. Press **Request post-close void**. Both the Head Auditor and the Asst Auditor must approve before anything changes.
- Every void and correction is recorded with your name.

Customer contacts

- **Reports → Customer Contacts** lists customers with their contact number and email from the sales, with the number of purchases and the last purchase date.
- Filter by dates or branch and press **Export** for an Excel file.

AR / credit sales and collecting payments

- A sale with payment **AR/PDC** needs a customer and a due date. Choose **Dealer**, **Franchisee**, **Agent** or **Other customer** first: only that kind is listed (a Dealer or Franchise sale lists only dealers or franchisees).
- Tick **There is a PDC** only when a post-dated cheque was given; then type the bank, cheque number and cheque date. Not ticked = no PDC.
- **Reminders:** every morning the branch (and the sales associate who made the sale), the auditors and the Owner get the list of receivables overdue or due within 7 days, nearest due first. The dashboard shows the same list.
- **AR / Credit** lists open invoices with the balance and how many days overdue. Tick **Overdue only** to filter.
- **AR per branch:** the table at the top totals each branch's open and overdue balance. Choose a branch (or press **Show this branch**) to list only its invoices; **All branches** shows everything.
- **Recording a payment:** tick the invoice(s) of one customer, type the amount (and a discount if any), choose Cash / Online / Card, then press the button.
    - **Branch staff:** the payment is sent to the Accounting Associate or Accounting Head for approval. It shows "Waiting for Accounting" until approved; the invoice balance drops after approval.

    - **Accounting:** the payment applies at once, a Credit Note number is issued and the branch is notified.
    - **Approving a branch's payment (Accounting):** My Approvals shows the customer, amount, how it was paid, the account it was deposited to, the invoices and the proof picture. **Reject** asks for the reason (wrong amount, wrong proof, money not received, …), which the branch sees.
- Each payment shows who entered it. Download the Credit Note as PDF from the register.

Branch expenses

1. Open **Expenses**.
2. Choose the account. Only your branch's expense accounts are listed (for example "Meralco - West Ave").
3. Type the amount and payee, and choose where the money came from: **Cash on hand** (sales cash not yet deposited; it cannot be more than the branch has, a notice pops up) or **Cash fund**.
4. Save. Your expense gets a number like WA-EX-000001.

- **Warehouse Associate and In-Charge** also record the warehouse's expenses here. They may also choose **Cash fund** when Admin has set up a cash fund for the warehouse: the balance is shown beside it, and the expense lowers it. They only spend the fund; those who hold the Cash Fund replenish it. Otherwise choose cash on hand, a bank account or an owner advance.
- Direct cost accounts are not available to branch staff. Only the Accounting Associate and Accounting Head can use them; direct cost is generated from sales automatically.
- Cash-drawer expenses reduce the cash for deposit in the Daily Close.

Cash fund

- Each branch keeps a fixed cash fund (for example ₱5,000) for small expenses.
- **Paying from the fund:** in Expenses choose **Cash fund**. The fund balance goes down.
- **Replenishing:** open **Cash Fund** and press **Replenish from today's cash sales**. The amount spent is taken from today's cash for deposit (the Daily Close and the Daily Sales Report show it) and the fund is full again. A Cash Fund Replenishment voucher is created.
- **Field Auditor:** open Cash Fund, pick the branch, type the cash actually found and press **Confirm count**. If it differs, type the reason. The difference is shown to Admin and the auditors.
- **Admin / Accounting Head:** set up or change a branch's fund amount at the bottom of the page.
- Balances of every branch fund appear on the dashboards of Admin, the auditors and Accounting.

Daily close, cash count and bank deposit

- **Daily Close** shows today's cash sales, cash collections, cash expenses, cash fund replenishment and the **expected cash**.
- Count the cash in the drawer and type how many of each bill and coin under **Money Breakdown**, then **Save cash count**. The variance shows at once (red if short).
- Record the **bank deposit** with the amount, bank account and date.
- The day closes when the branch **submits its Daily Sales Report**, or by itself at midnight Manila time. After that, changes need approval (post-close edit).
- Record every deposit for the **sales day it covers**. Cash not yet deposited shows under **Cash on Hand**.

- **Cash shortages:** HR or the Head Auditor can charge a shortage to the staff on duty from the **Cash shortages** list on the same page.

Daily Sales Report

- **Reports → Daily Sales Report**, or the buttons on Daily Close: choose the branch and date, then **Review report (Excel)** (the same layout as the paper Sales Report) or **Review report (PDF)**.
- Branch staff get the report without cost. Admin, the auditors and Accounting can switch on the audit view with cost of sales.
- Every sale is counted once. Cash subtotal plus online, card and shipping equals all sales of the day except AR / PDC.
- **Credit Card** shows the number of card transactions and the products sold on card; card sales are counted in "Number of products".
- **Online & card payments by account** shows where the non-cash money went (each bank, **Gcash (GWS)**, card and platform account). The Excel file has it on the **PAYMENT ACCOUNTS** sheet.

Editing a DR before the day closes, and the DR list of the Daily Sales Report

- **DRs entered.** At the bottom of the **Daily Sales Report** there is a list of every DR entered that day (DR / SI number, customer, channel, payment, total). **Click a DR** to open it.
- **Edit.** While the day is open, each DR has an **Edit** button (sales associates of the branch, the Head Auditor, the Asst Auditor, the Franchise Owner and the Owner). You may change the items, quantities and prices, the DR / SI number, the customer name, the due date and the notes. **Save the corrected DR**: the DR keeps its **date**, the old document is voided with a note and the corrected one replaces it, so stock, sales, AR and the Daily Sales Report follow by themselves. Every edit is recorded under *Who did what*.
- **Until when.** A day is open until the branch **submits its Daily Sales Report** (and never after midnight). After that the Edit button is gone: use **Post-close edit request** (Void / correct) as before.
- **Not editable here:** a DR that already has an AR payment (void the payment first), a DR that used a member voucher (void it and record it again), a consignment sale, and a franchise DR the franchise has already received (the franchise reports the problem first).
- **Wheysted member fields only where they apply.** In New Sale the **Wheysted member**, **customer phone / email** and **6-Pack sticker** boxes appear only for retail customers. Choosing **Franchise, Dealer, Agent or Marketplace** removes them (and clears anything typed); the server ignores them for those sales too.

Inventory Reports: from a Sales figure to its DRs and its Daily Sales Report

In the **Daily Inventory Report**, every figure is clickable. **Click a Sales quantity**: a list shows the **DRs** that made it (DR / SI number, items and quantities, date). **Open the DR** goes to that sale; **Open the Daily Sales Report of <date>** goes to the Daily Sales Report of that branch for that day (for example 10 Oct 2026), where the DR was entered. A DR that was voided or corrected later is still listed and marked **VOIDED** (its stock came back under Returns). Pull Out and Transfer In still open their forms.

Submitting today's Daily Sales Report (branch staff)

1. Before 8 PM, open **Daily Sales Report** (the dashboard reminds you) and review every detail: on screen, or in **Review report (Excel / PDF)**. Compare it with your DR/SI slips, card slips, receipts and the cash you counted.
2. Press **Submit today's report…**, tick the four review items (sales, card and online payments, expenses, money breakdown), tick **"I acknowledge that this Daily Sales Report is true and correct"** and press **I agree — submit**.
3. Today is then closed for your branch. Any later change follows the revision protocol: a post-close edit approved by the auditors.

- You are reminded at 7:30 PM. A report not submitted by 9 PM is submitted automatically **as it stands**, and the Head Auditor, Asst Auditor, Audit Associate and HR are notified.

Requesting stock from the warehouse (branch)

1. Open **Transfers**.
2. In **Request stock from the warehouse**, add the products and quantities, and a note if needed.
3. Press **Send request to the warehouse**. The warehouse is notified and prepares the transfer.

- You do not make the transfer form. When the warehouse submits it, it appears under Transfers as incoming, and you receive it.

Receiving a transfer at your branch

1. Open **Transfers** and click the incoming transfer (View: Incoming).
2. Print your copy with **Transfer-In copy** if you need paper.
3. Check the items. Tick each line that arrived complete, or **Tick all** if everything is right.
4. For a line that is short, leave it unticked, type the quantity actually received and a note.
5. An item that arrived but is not on the form: **+ An item arrived that is not on the form**, pick it and type the quantity.
6. Press **Confirm receipt**. What you received is added to your branch.

When the received quantity is different from the form

1. The receiving branch receives what arrived; the rest waits "in transit" and is in no branch's count.
2. **Head Auditor** reviews first: confirms the difference, or finds the receiver miscounted (the receiver then gets the items as on the form).
3. **Sending branch** agrees or disagrees within **2 days** (reminder after 1 day). No answer or disagreement → the **Owner** decides: difference stands, received after all, lost (company expense) or lost and charged to staff.
4. A confirmed difference creates an adjustment form with the same number plus **-002** (missing items back to the sender) and **-003** for items received that were not on the form. The original form never changes. The transfer page shows each step, who decided and the adjustment forms.
5. **HR** gets a notice for every case with the person answerable and their number of cases in 30 days; from the third, HR is advised to **Refer to the Owner**.

Pull-outs and returns from a branch

- **Transfers → Pull-out from [your branch]**: "From" is always your own branch. Choose where it goes (**To**), the type (Return, Replacement, Internal…), the return reason if it is a return, and the items.
- **Create draft**, check it (you can print the draft), then **Submit for approval**. Internal transfers are approved by the Head Auditor or the Asst Auditor; transfers to a franchise by Admin.
- Every transfer is numbered like WA-PO-000003 (pull-out) and the receiver's copy like WA-TI-000003.

Warehouse: receiving supplier deliveries

1. **Receiving → New receiving**: choose the supplier and type the supplier's invoice or DR reference.
2. Add each product with the quantity, free quantity, **expiry date** and batch number.
3. **Same item, different expiry dates:** press **+ another expiry** on the line and enter the quantity for each date. Each date becomes its own batch and is shown everywhere the item appears.
4. **Upload Supplier Delivery Receipt** (photo or PDF), **Create draft**, then **Submit**.

- A Warehouse Associate's delivery goes to the **Warehouse In-Charge** first (checks the goods), then to the **Head Auditor** (cost).
- Warehouse staff do not see or enter costs. The Head Auditor types or confirms the cost and approves. If every cost is unchanged from the last delivery, it is approved automatically after 24 hours.
- The stock is added to the warehouse when the Head Auditor approves (the last step).
- **Upload Supplier Delivery Receipt** (on the new delivery form): a photo or PDF of the supplier's DR / invoice, saved with the delivery.

Warehouse: sending stock

1. **Transfers → Send stock from the warehouse.** "From" is the warehouse. Choose **To**: any branch, franchise or consignee. A branch's stock request fills this in when you open it from the notification.
2. Add the items and quantities. The system picks the batches with the earliest expiry first.
3. **Create draft**. You can **Print Pull-Out (draft)** and **Edit draft** until it is right.
4. **Submit for approval.** Company branches: the Head Auditor or Asst Auditor approves. Franchises: Admin approves.

- The receiving branch sees the transfer only after you submit it.

Warehouse In-Charge: correcting an associate's entry

- The In-Charge enters receivings and transfers the same way as the associate.
- To change a document someone else prepared (draft or waiting for approval), open it and press **Propose edit**. The change is sent to the preparer, who must **Accept** it before it applies. A submitted document then goes back through approval.
- Every accepted correction is recorded in the Revision Log against the preparer.

Stock on hand and expiry dates

- **Stock on Hand** shows the quantity per product and location, the nearest expiry, and the **quantity per expiry date**. An item with more than one date is marked, so you can see the difference.
- The **Batches** table lists every batch with its expiry, in the order it will be sold (earliest first).
- **Inventory Reports → Daily Inventory Report** gives beginning, received, transfers in and out, sales, adjustments and ending per day. Staff see quantities only; Admin, the auditors and Accounting also see cost.

Expiry and alerts

- **Expiry & Alerts** groups stock into expired, less than 1 month, 1–3 months and 3–6 months, lists critical stock (below the minimum) and slow-moving items.
- Notifications about expiring and critical stock arrive in the bell every night.
- **Days of stock left** (top of the page): for each item, how many days it will last at its **average daily sales** (choose the last 14, 30, 60 or 90 days). The **most critical items are first**: **Out** (no stock but still selling), then **Critical** (7 days or less), **Low** (8–14), **Watch** (15–30) and **Enough** (over 30); items with stock and no sales are last. Each line also shows the date it runs out and how many to restock to cover 14–60 days, and what the warehouse has. Tick **All locations together** for the company-wide days. Sales less returns are counted (the warehouse also counts its e-commerce pull-outs); per location only sales recorded at that location count.
- **Search:** every list on this page has the search box above it and a small **filter** under each column title (SKU, Product, Brand, Location, Level…); type in one or more and the rows narrow down. Export xlsx / CSV exports what is shown.

Weekly count sheet (sales associates)

- Every sales associate submits one count sheet each week (Monday to Sunday). Until you do, a red alarm shows on your dashboard.

1. Press **Start my weekly count** on the dashboard (or Inventory Count → Start my weekly count sheet).
2. Every item is listed:
    - first the items the system has at your branch, with today's beginning count;
    - then the items **not in the system** (for stock that was never transferred in the system).

Type the **actual count** for the first group. In the second group, type only what you find; blank means none.

- Each line also shows the day's movements after the beginning count: **+ Received**, **+ Transfer in**, **+ Returns**, **− Sales** (entered today), **− Transfer out**, **± Other** (write-offs, tasting, adjustments), then **Expected now**. Beginning + in − out ± other = Expected; compare it with what you count.

1. **Save actuals** as you go, then **Submit count**. HR can see who did and did not submit.
2. If anything differs, a **discrepancy case** opens. You, the Head Auditor, Asst Auditor, Audit Associate, the Owner and HR are notified, and you have 7 days to explain.

- **Excel: Download sheet (xlsx)**, type the counts in the "Actual count" column, and **Upload filled sheet**. The items come in the same order.
- After submitting, the sheet is locked. If you made a mistake, use **Correct this count…**: the Head Auditor approves the change.

Audit count (auditors and Field Auditor)

1. **Inventory Count → Start an audit count**: choose the branch or franchise you are auditing and press **Create count sheet**.
2. Every item is listed: first those the system has at that location (with the start-of-day beginning count and the expected quantity now), then those not in the system. Type the **actual count**; in the second group, only what you find. The difference is computed for you, and the expiry dates on hand are shown.
3. **Submit count**. The sheet is locked. Any difference opens a discrepancy case. The branch staff, the auditors, the Owner and HR (company branches) are notified.

- **Revisions:** press **Correct this count…**, type the corrected numbers and the reason. Only the Head Auditor can approve, and Admin is notified. The revision is logged.
- You can also download the sheet as Excel, fill it offline and upload it.

Discrepancy cases, countdown and explanations

- A count with a shortage opens a **discrepancy case** (number like WA-DC-000001) with a 7-day deadline.
- **Branch staff** see on their dashboard, in bold red, how many days are left before the shortage is charged to them.
- **Explaining:** open the case (Discrepancies) and use **Explain this discrepancy**. HR is notified and the Head Auditor decides. If accepted, the difference is adjusted and nobody is charged.
- **Head Auditor:** mark it resolved after a new matching count, or accept the variance as an adjustment.
- At the deadline, a shortage with **no explanation** (or a rejected one) becomes a **Charge Form** at franchise price, sent to HR. An explanation still waiting for the Head Auditor holds the charge until it is decided.

Write-offs: expired and damaged items

1. **Write-offs**: add the expired or damaged items and the reason.
2. Choose **Expensed by the company** or **Charged to staff** (tick who). A staff charge is split equally.
3. Submit. The Head Auditor approves. The items leave the inventory either way.

- A staff charge creates a Charge Form automatically. It appears in HR's Charge Forms and in the staff member's **My Pay & Charges**.

Store inspection report

- **Field Auditor: Store Inspections → New**, choose the branch and the staff on duty, then fill the 19 checklist items from the paper form: store cleanliness, stock display, permits (Business Permit, FDA, BIR COR, Barangay Clearance, BIR 0605, IPO), columnar, alterations, sales deposit, cash fund, actual stocks vs system, products not carried by GWS or not from the main branch, near expiry, clumped stocks, cleanliness of stocks, daily manual inventory (GSheet and hard copy), uniform, ID / name plate, product knowledge and monthly monitoring. Add comments and press **Submit to HR**.
- HR, Admin and the Head Auditor are notified. The staff on duty acknowledges the report. HR reviews it.
- Download the report as PDF from the report page.

Approvals

- **Approvals** lists everything waiting for you, grouped by kind. Click a row to see the details, then **Approve** or **Reject** (add a note if needed). Tick several and use **Approve selected** to do many at once.
- Who approves what:
  - Receiving cost: Head Auditor (auto after 24 hours if the cost is unchanged).
  - Transfer between company locations: Head Auditor **or** Asst Auditor.
  - Transfer to a franchise, special price, price change, period lock: Admin.
  - Post-close edit of a company branch: Head Auditor **and** Asst Auditor (both).
  - Write-off, discrepancy resolution, count revision, discrepancy explanation, Audit Associate correction: Head Auditor.
  - AR payment entered by a branch: Accounting Associate **or** Accounting Head.
  - Warehouse edit: the person who prepared the document.
  - New product, supplier, category, customer, agent, rider, branch, account, employee, user account or import file: Admin (Owner).
  - Stock in or out of the warehouse entered by a Warehouse Associate: the Warehouse In-Charge. For supplier deliveries the In-Charge checks the goods first, then the Head Auditor approves the cost.
- Each document that needs approval shows a **workflow bar**: every step, who must approve it, and who already did. With two or more approvers you can see that one has approved and the other has not yet.

Approval workflow and your requests

- Every document that needs approval (sale with special price, transfer, receiving, count, discrepancy case and others) shows a coloured **workflow bar** at the top: green steps are approved, amber steps are waiting, red is rejected, grey was cancelled.
- Each step names who must approve it (for example "Head Auditor" or "Head Auditor and Asst Auditor") and, once approved, who did it and when.
- The dashboard card **My requests** lists what you sent and where each one stands. You are notified each time one of your approvers acts, not only at the end.

New products, suppliers and other main records (Owner approval)

- A new product, supplier, category, customer, agent, rider, branch, account, employee or user account entered by anyone except Admin is **waiting for the Owner**. The list shows it under "Waiting for Owner approval" and it cannot be used yet.
- Admin sees it under **Approvals → New master data (Owner approves)**, checks the details and approves or rejects. On approval it is created and the person who entered it is notified.
- Imports of product, employee and similar files work the same way: the file waits for Admin, then loads on approval.
- Admin's own entries are created at once.

Editing and deleting products and back-office data

- Only Admin (Owner) can delete products, suppliers, customers, agents, riders, categories and branches, and only Admin can edit branches and other back-office records.
- The Head Auditor and Admin can edit products and suppliers.
- A record that is already used in sales, transfers or other documents cannot be removed; it is **archived** instead (hidden from new forms, history kept).

Price update notices

- When a selling price changes (price change, new product), the dashboard card **Price updates** shows it, but only for the prices that apply to you. A franchise sees only its franchise price.
- Changes in supplier **cost** are shown only to the Owner, the Head Auditor, the External Auditor and the Accounting Head.

HR: new employees and their user accounts

- **Payroll & Contributions → Employees → Add employee:** the employee waits for Owner approval before payroll can use it.
- Open an approved employee and press **Create user account…**: username (no spaces), role, branch and a temporary password (**Generate** makes one). Email is optional. The account waits for the Owner (or Admin). The person signs in once it is approved.
- HR cannot create Admin or External Auditor accounts, and has no access to franchise staff or franchise payroll.

Warehouse: In-Charge approval of stock in and out

- Stock that a **Warehouse Associate** receives (supplier deliveries, transfers in) or sends out (transfers, pull-outs) is not counted until the **Warehouse In-Charge** approves it.
- For supplier deliveries the **In-Charge checks the goods first** ("1. Waiting for the In-Charge to check the goods"), then the **Head Auditor approves the cost** ("2. Goods checked · waiting for the Head Auditor's cost approval"). The stock is added only after both.
- If an approval cannot go through (for example a new product without a cost), the approver sees the reason and the document stays in their list to try again.
- When the In-Charge enters the document personally, only the Head Auditor's cost approval is needed.
- Sales from the warehouse do not need In-Charge approval.
- Quantities on transfers and receivings can never be negative. Negative figures appear only in discrepancy results and pay computations.

Franchise owner: staff pay, charges and books

- **Franchise Portal → Overview:** choose whether your franchise associate may receive stock from GWS. If yes, the associate confirms deliveries and you are notified. If no, only you can confirm. The associate never sees franchise cost.

- **Staff pay & charges:** record your associates' salaries. Each salary is a franchise expense, visible only to you; each associate sees only their own pay under **My Pay & Charges**. Create charges for your own staff and branch here. GWS HR has no access to them.
- **Income statement & balance sheet:** generate them for your branch only, separate from the other GWS branches.

Bank & Office (Executive Assistant)

- **Bank & Office → Bank entries:** choose the bank account, the book (advances to, advances from, supplier payables, office expense, receivables, fixed asset, equity or bank transfer), the account, the amount and the description, then save. A journal voucher is posted.
- **Supplier payables** lists unpaid supplier bills (amounts only, no product cost). **Office expenses** lists main-office expenses.
- **Balance sheet accounts** shows the balance of each balance sheet account. Branch reports, cost, income and other reports are not available to this role.

Accounting: editing journal entries

- The Accounting Head and the Accounting Associate can open a journal voucher and press **Edit entry** to change the lines. Debits and credits must balance, amounts cannot be negative, and the period must be open.
- The person who made the voucher, the person who made its source document, and Admin (Owner) are notified. Every change is kept in the Revision Log.

Company letterhead and logo (Admin)

- **Settings → Company letterhead:** type the company name, address, contact and TIN, then upload the logo (PNG, JPG, WEBP or SVG, up to 2 MB).
- Use the **Remove the background** slider to cut away a plain background around the logo; the checkered preview shows the result; press **Use this logo** to save it.
- The logo and details appear at the top of every printed form and PDF, on the sign-in page and in the menu.

Corrections by the Audit Associate and the Revision Log

- **Audit Associate:** open the sale or transfer with the error and use **Request a correction**: choose what to correct, type the new value (or choose to void) and the error found, then **Send to the Head Auditor**. The staff member who made the document is notified at once.
- Only the Head Auditor can approve. Nothing changes until then.
- **Revision Log** (HR, auditors, Admin): every approved correction, with who made the document, who asked, who approved, the reason and the change. The **Errors per staff** table counts corrections per person for the chosen dates; three or more are shown in red. Click a name to see that person's corrections. Export to Excel.

Your charges and pay (My Pay & Charges)

- **My Pay & Charges** shows only your own charges, loans or advances and payslips.
- When you are charged (cash shortage, damaged or expired items, inventory discrepancy), you are notified. Open it and press **Acknowledge** to confirm you have seen it.
- The amount is deducted from your pay over the number of pay periods HR set. Nobody else except HR, the External Auditor, the Accounting Head and Admin can see who was charged.

HR: charge forms

- **Charge Forms** lists every charge: discrepancy, expired, damaged, cash shortage and other. Most are created automatically (from discrepancies, write-offs charged to staff, and cash shortages).
- **New charge form:** choose the kind, the branch and the reason, add what is charged (description, quantity, amount), tick the staff, then **Create charge form**. The amount is split equally.
- Open a form to change the split between staff, set the number of pay periods, and **Finalize**. Payroll then deducts it.
- Print the **Charge Form** and the **Salary Deduction Authorization** from the form. No uploads are needed.
- The Acknowledged column shows which staff have confirmed their charge.

HR: payroll and government contributions

- **Payroll & Contributions → Employees:** add each employee with their rate and branch, and link them to their user account so charges reach them.
- **Create run** for a period. It fills in basic pay, SSS, PhilHealth and Pag-IBIG (employee and employer shares from the tables), loans and charge-form deductions. Edit overtime and incentives, then **Finalize**. The Accounting Head picks the paying bank account and closes the run.
- **Contributions register:** SSS, PhilHealth and Pag-IBIG per employee per month, with **Register xlsx**. Record each payment to the agency with **Record payment**.
- Print payslips and each employee's ledger from the run.
- Names and amounts per person are visible only to HR, the External Auditor, the Accounting Head and Admin. The Accounting Associate sees totals only.

HR: weekly count compliance

- **Weekly Count Check** shows, for each sales associate, which weeks they submitted a count sheet and which they missed. The dashboard shows who missed last week.

Products, prices and price changes

- **Products** lists every product with its SKU, category and prices per channel. Staff see selling prices only.
- **Price Changes:** Admin prepares a new price list with an effective date; it takes effect after approval.
- Minimum stock levels per branch (for critical-stock alerts) are loaded by Admin under **Imports** (minimum stock file).

Suppliers and imports

- **Suppliers** are shown by code to warehouse staff; Admin and the auditors see names.
- **Imports** loads products, the chart of accounts, opening balances and minimum stock levels from the company Excel files.

Consignment

- **Consignee accounts** (Catalogue → Consignees, the Owner only): name, what they pay (retail price, consignee price or agreed cost), payment terms, contact and address. One step creates the consignee's stock location, customer, receivable account and agreement.
- **Consignment** has three simple steps:
  - **1. Send goods to a consignee:** choose the consignee and items → **Save draft** → **Print draft** → **Submit for approval**.
  - **2. Record consignee sales:** consignee, period, items sold. Prices are filled in from the agreement and can be edited. Print the draft, then submit.
  - **3. Goods returned by a consignee:** consignee, items and the branch taking them back → save, print, submit, then confirm when they arrive.
- **Approvals:** a Sales Associate's consignment goes to the Head or Asst Auditor first; a Warehouse Associate's to the Warehouse In-Charge. **The Owner always gives the final approval.** The Owner's own entries apply at once.
- **Stock at consignees** shows what each consignee holds, what they sold and what they still owe. Value at cost, and prices of cost-based agreements, are shown only to people allowed to see cost.

Franchise portal

- **Franchise Portal** shows the franchise's stock, incoming transfers, today's sales, the amount owed to GWS and the franchise's own profit and loss.
- The franchise associate confirms incoming transfers and records sales, but cannot change prices.

Accounting

- **Chart of Accounts**, **Journal Vouchers** (every posted entry, with a link to its source document), **Trial Balance**, and **Periods & Opening** (beginning balances and period locks).
- When automatic posting is switched on (Settings), sales, expenses, transfers, receivings, charges, cash fund movements, payroll and remittances post journal vouchers by themselves.
- **Inventory Cost:** inventory cost movements per day or per month (beginning, received, transfers in, pull-outs, direct cost of sales, ending) and direct cost generated from sales, per branch, with Excel export.
- Locking a period: the Accounting Head requests it and Admin approves.

Financial statements

- **Financial Statements:** Income Statement, Balance Sheet, net income per branch and Cash Flow, for the chosen period. Only Admin and the External Auditor can open them.

Users, audit log and settings (Admin)

- **Users & Roles → New user:** type the full name and company ID, a username (no spaces), the role and the branch (only asked for roles that work at a branch). Email is optional. Press **Generate** for a temporary password, then **Create account**. If the button is grey, the text beside it says what is still needed. The confirmation shows the username and temporary password to give the person, who sets their own password and accepts the statement at first sign-in.
- Click a user to change the role or branches, tick extra permissions for a custom role, switch the account off, or reset the password. **Activity** opens everything the person did.
- **Audit Log** records every action with the person, time and details.
- **Settings** holds thresholds (discrepancy days, alert levels, automatic posting and others).

Inventory reports: item search and items with movement first

- **Inventory Reports:** type part of a name, SKU or brand in **Search item** and press **Search**. It works for the daily report, the monthly movement sheet and the stock ledger.
- **Stock ledger:** each movement shows its document (Sale DR, Pull-out, Transfer-in, Supplier delivery, Count sheet, Write-off…) with its number; click it to open the document.
- The **Daily Inventory Report** lists the items that moved in the period first (with a "moved" badge), then the items only carried in stock. The Excel file follows the same order and has a **Movement** column. Cost columns appear only for people allowed to see cost.

Freebies received from suppliers

- Items a supplier gives for free go in the **Free (freebie)** column of the delivery, not in Qty.
- They are added to stock at the cost the Head Auditor approves on that delivery.
- With automatic posting on, they are booked as **Dr Inventory / Cr Other Income – Supplier Freebies**.

Incentive paid from a sale

1. On **New Sale**, press **+ Add incentive expense**.
2. Choose **Sales incentive** or **Rider / driver incentive**, who receives it, and the amount.
3. It is recorded as the branch's expense (Incentives / Rider-Driver Incentive account), paid from the cash on hand. It lowers the cash to deposit and shows on the Daily Sales Report.

- Voiding the sale voids the incentive too.

Cash on hand (sales cash not yet deposited)

- **Cash on Hand** lists each sales day's cash still to deposit, the deadline and how many days are left. The branch dashboard shows the same, in red when overdue.
- **Days allowed:** the Head Auditor or the Owner sets, per branch, how many days after the sales day the cash must be in the bank (default 1).
- **Extension:** press **Request extension** on a day, choose the new date and give the reason. The Head Auditor **and** the Owner must both approve.
- **Reminders:** every morning the branch, Head Auditor, Asst Auditor and Audit Associate are told about cash due or overdue. A day past its deadline without an approved extension becomes an **HR notice** for a Notice to Explain.

HR notices (Notice to Explain)

- **HR Notices (NTE)** lists situations HR must act on, such as cash not deposited on time. Each notice shows the amount, the sales day, the deadline and the staff on duty.
- Issue the NTE, press **Mark NTE issued** and write a note; **Close** it when settled.

Product cost and days to consume

- **Edit cost** on a product: type the new cost, the effective date and the reason, then **Send for approval**.
  - The Head Auditor's change is approved by the Owner, and the Owner's by the Head Auditor.
  - On approval, the Owner, Head Auditor, External Auditor and Accounting Head are notified. Nobody else ever sees cost.
- **Days to consume one unit** (for example 30 for a 30-serving tub): drives the customer re-order reminder.

Customer contacts and re-order follow-ups

- **Customers & Follow-ups → Customers & items ordered:** every customer with contact number, email, the **items they ordered**, number of purchases and totals. Export to Excel.
- **Re-order follow-ups:**
  - When a customer with a number or email buys a product that has days to consume, a follow-up is due after quantity × days.
  - On that morning the store where they bought it is notified to call.
  - Tap the number to call, or press **SMS** / **Email**: the Owner's message is filled in and can be edited before sending. Then press **Contacted** or **Dismiss**.
- **The Owner** writes the SMS and email in **Settings → Customer re-order messages** and can make them go out automatically. SMS needs an SMS account (Semaphore) and email needs a mail server in the settings file; until then, messages are logged as "not set up".

E-commerce: TikTok, Shopee and Lazada

Each platform has its own tab, reports and accounts; nothing is mixed. E-commerce keeps no stock of its own: items come from the Warehouse.

1. **Orders → pull-out:** the E-comm Associate uploads the platform's order / waybill export. The new orders go on one draft Warehouse pull-out (oldest expiry first). Unknown SKUs are matched once and remembered; duplicates and cancelled orders are skipped.
2. **Warehouse In-Charge:** approves the pull-out (the only approval). The items move to "TikTok / Shopee / Lazada – with courier" until the platform pays or the parcel comes back.
3. **Payouts:** the associate uploads the platform's payout file and sends it to Accounting. The Accounting Head checks that gross sales − discounts − fees − refunds − withholding tax = payout, then approves. The posting books:
    - the sale;
    - each fee to its own account per platform;
    - the 1% creditable withholding tax;
    - the payout to the platform's cash account;
    - the cost of goods sold.
4. **Returns:** the associate records the parcel by order ID or tracking number. The In-Charge marks each item:
    - **Good:** back to Warehouse stock.
    - **Damaged:** a write-off goes to the Head Auditor.
    - For an order already paid, the cost goes back to inventory.
5. **Ads:** entered or uploaded per platform and month as an expense, paid from the platform balance or a bank / card account.
6. **Order tracker:** shipped, paid, returned and **overdue** orders (shipped over 30 days ago, not paid nor returned; the days are in Settings as `ecom.overdue_days`). Reminder every Friday.
7. **Profit report:** TikTok | Shopee | Lazada | All. Cost of goods and profit after cost only for people allowed to see cost. Each platform also appears as its own line in Sales Graphs.

Dashboard: today's sales and cash on hand (branch staff)

- **Today's sales by payment:** cash, online (bank / GCash), credit card and on credit (AR / PDC), and the total.
- **Cash on hand:** the sales cash not yet deposited, always shown (₱0 = all deposited), with the deposit deadline.

Sales targets, Sales Manager and Agents

- **Sales Targets:** the Sales Manager sets a monthly target per branch and per agent; the Owner approves it. The page shows target, sales so far and % achieved against how much of the month has gone (green on track, amber slightly behind, red behind).
- An agent listed at several branches is one person: all their sales add up. The Sales Manager links each agent to their **Agent** account.
- **My Sales (Agents):** own sales at every branch, own target and achievement, and customers who have not paid yet, nearest due first.

- The Sales Manager and Agents never see cost, margin or supplier data.

Agent field work: outlets, itineraries, photos and consignments

Outlets (menu: Outlets). The gyms and stores an agent works with.

1. **Agent:** press **+ Add an outlet** (name, type, address, city, **contact person, number, email**, a **picture**), or **Upload Excel / CSV** (press **Template** to get the columns: Name, Type, Address, City, Contact person, Phone, Email, Notes). A name already in the database is skipped.
2. **Sales Manager: Waiting for approval** lists what the agents added; tick, then **Approve** or **Reject** (with the reason). Only approved outlets can be tagged on a sale or put in an itinerary.
3. **Changes and removal:** after approval an agent cannot change an outlet alone: **Ask for a change** goes to the Sales Manager (**Change requests**), and the **Owner is notified of every change** that is approved or that the Sales Manager makes. Only the Sales Manager can ask to **Remove outlet**; the Owner approves, and only if the outlet has **no order in the last 3 months**.
4. **Areas** (tab Areas): the Sales Manager creates areas and assigns each to an agent. An outlet can be moved to another area or agent, or **shared** with another agent (the first agent stays its owner).
5. **Pipeline:** an outlet moves from Prospect to Visited (a reported visit), First order (a sale is tagged to it) and Regular (3 orders in 90 days); Sample given is set by the agent. The **Map** tab shows outlets that have a location.
6. The Sales Manager, Head Auditor and Owner see every agent's outlets; an agent sees only their own and the ones shared with them.

My Itinerary (agents, best on the phone).

1. Choose the day, then **Plan the stores for this day** (tick your approved outlets) or **Upload itinerary file** (columns Date and Outlet).
2. At each store press **Report this visit**: **take a photo** of the store (required; the time is kept with it), choose the shelf check (GWS on the shelf, low, out of stock, not carried), type competitor brands if any, then **Visited**. The phone sends your **location** with it, so allow location for the site. A store not visited is marked **Missed** with the reason.
3. Press **Submit the report for this day** when every store is reported. A day that is submitted is locked.
4. **Claims:** under the stores, claim fuel, transport or meals (receipt photo optional). The Sales Manager approves, then Accounting is told to pay.

Field Monitoring (Sales Manager, Head Auditor, Owner).

- **Daily itineraries & photos:** plan vs actual per agent, then each day's stores with the photo, time, location link, shelf check and notes.
- **Agent scorecards:** visits, new outlets, sales against the target, unpaid invoices, consignment out against the maximum.
- **Areas & top outlets**, **Outlets not ordering** (no order for 30 days or more) and **Fuel / transport claims** (the Sales Manager approves).
- Every morning the Sales Manager is told of agents with no itinerary yesterday, visits not reported, consignments with no sales report for 15 / 30 / 60 days and maximums almost used; an agent with no plan for the day gets a reminder.

Agent Consignments.

1. **Sales Manager:** link each consignee account to the outlet (and so the agent) responsible for it.
2. **Maximum:** the Sales Manager sets a **maximum for the agent (all outlets together)** and, if wanted, **for one outlet**; the **Owner approves** it in My Approvals. Consignment is valued at the retail price (SRP) of the stock still with the consignee.
3. A consignment out that would take the agent (or the outlet) over the maximum is **stopped when it is submitted**, with the amounts shown. An agent with consignees but no approved maximum cannot be sent more until one is set.
4. **Agent: My Consignments** shows what is at each consignee, what they still owe, the last sales report and how much of your maximum is used.

Tagging a sale to an agent's outlet

In **New Sale**, under **Agent's outlet / gym (optional)**, pick the **agent** first and then one of that agent's **approved outlets**. The sale shows the outlet in the Sales list and the agent sees the order under My Sales and on the outlet. Tagging does not change the price or the agent's incentive. If the outlet is not listed, the agent uploads it under Outlets and the Sales Manager approves it first.

Wheysted members: customers with a QR card

What it is. A customer who joins becomes a **Wheysted member** with a member number (WHY-000001) and a **QR card**. Every purchase tagged to the member builds their profile, and the member can see their own purchases online.

At the counter (every sale). In **New Sale**, under **Wheysted member**: scan the customer's QR card (a USB / Bluetooth QR scanner types the code into the box; on a phone or tablet press 📷 **Scan**), or type the member number, name or phone and pick them. Their name, number and email fill in, and the sale goes on their account. New customer? Press **+ New member** (name and mobile number; the number and QR card are made at once). Past sales that carry the same mobile number join the new member automatically.

Wheysted Members (Sales Manager, Owner; the Head Auditor can view).

- The list shows every member with orders, amount spent, average order, orders per month, last purchase and days since, **favorite item, brand and category**, main branch, segments, joined date and whether they have an online account. **Click a title to sort** (for example by amount spent or by days since the last purchase) and use the **filter under each title**. **Export xlsx / CSV** exports what is shown.
- **Segments:** VIP (top 10% spenders with 2+ orders), Frequent buyers (3+ orders and at least one a month), New (joined in the last 30 days), At risk (no purchase for 46–90 days), Lapsed (over 90 days), Never bought, Birthday this month. Choose one under **Show**.
- Click a member to see their **QR card (Print card)**, contact details, what they buy most, spending by month and every purchase with its items. The Sales Manager can edit the details, set whether they agreed to emails / SMS, put past sales with their number on the account, reset their online password, or block them.
- **Who bought this item:** type an item (or part of its name), pick it, optionally choose dates: the customers who bought it are listed with times, quantity, amount and last purchase (members and also customers who only left a number or name at the counter).
- **Make members from my sales** turns the customers already in your sales (name with a mobile number or email) into members, and puts their past purchases on their accounts. Do this once, after checking.

The member page for customers. Customers open **your web address followed by /member** (for example `https://your-site/member`) on their phone: **Become a member** (name, mobile, email, password; they tick that they agree to the terms and, if they want, to emails / SMS), then **My card** (the QR code and number to show at the counter), **My purchases** (every purchase with its items) and **My details**. If the store already made them a member, they type the **member number** when signing up to open that account (the mobile number must match). A customer's own sign-up never shows other people's past purchases. A forgotten password is reset by the store (Reset online password).

Wheysted member program: points, vouchers, member prices and more

What it adds to the members. Every member now has a **tier** (Bronze, Silver, Gold, from what they spent in the last 12 months), **points** (1 point for every ₱100 spent; the Owner can change the rules), **vouchers**, a **fitness profile** (goal, gym, favorite and disliked flavors, how they heard about us, the best way and time to reach them) and a **contact log**.

At the counter (New Sale). After you pick the member you see their tier and points, **their vouchers** (tap one to use it on this sale; it takes its value off the supplements only, once, and a voided sale gives it back), what they **usually buy** and what other members who buy the same items **also take** (a good thing to suggest), and their favorite / disliked flavors. **Member prices** are applied by themselves to items where you do not type a price (no special-price approval needed). The button **Customer asked for an item we didn't have** logs lost sales in two taps.

Wheysted Members tabs (Sales Manager and Owner; the Head Auditor can view).

- **Top spenders:** the best 30 members. “Call due” means nobody logged a call or message in 30 days: call them, then **Log a call**.
- **Insights:** a **heat-map of when customers buy** (day × hour), **where members heard about us**, goals, gyms, tiers and best contact method with how much each group spends, and the **share of sales tagged to a member** per branch and per sales associate against the Owner's target (30% by default).
- **Feedback:** the ratings members give after a purchase (stars, “would you buy this again?”, comments), per branch and per product. A low rating adds a complaint note to the member and tells the Sales Manager and Admin.
- **Member prices:** a lower price for members on chosen items, with start / end dates.
- **Lost sales:** items customers asked for that we did not have, most asked first. The same count appears in **Expiry & Low Stock → Days of stock** (column *Customers asked*).
- **Program rules** (Owner / Sales Manager): points per peso, tier limits, voucher validity, the referral voucher, the capture target, and the **automatic messages**: back-in-stock, re-order reminder, birthday voucher, anniversary voucher, win-back voucher, rating request. They go out every morning at 9:00 by SMS or email (the member's preference, only if they agreed), never twice, and are **off until switched on** (back-in-stock is on). **Run the automatic messages now** does today's round at once. Email / SMS must be set up in `api/.env` first; if not, the result is “not configured” and nothing is sent.
- Open a member to see tier, points, vouchers (give one, or adjust points with a reason), the contact log, replacement tickets on their purchases, and the fitness profile (Edit). Open a gym in **Outlets** to see the members who train there.

Member page for customers (`/member`). *My card* now shows tier, points (turn points into a voucher), vouchers to show at the counter, and the referral note. *Shop* lists products with the **member price**; a member can **reserve** an item for pick-up at a branch, or press **Out of stock · tell me when available**. *Purchases* has a **Rate this**

purchase link (the page `/survey`, no sign-in). *Me* holds the fitness profile and contact preferences. At sign-up a member can type the number of the member who referred them: **on the new member's first purchase both get a voucher**.

Member Reservations (every branch; menu *Member Reservations*). Reservations for your branch: prepare the item, press **Ready** (the member is told) and **Picked up** when they collect it, then record the sale with their card.

Campaigns now also reach chat apps. *WhatsApp, Viber and Messenger* have no free way for the system to send by itself, so the campaign becomes a **list for the staff**: **Open WhatsApp + copy message** opens the chat with the message ready (Viber / Messenger: paste it). Add filters for goal, tier and preferred contact method, and **Give each person a voucher** (each gets their own code, in the message through `{voucher}`). Quick-start buttons: win-back, birthday month, VIP thank-you, welcome. Open a sent campaign to see **who bought within 7 days**, orders, sales, and vouchers given / used.

Customer Service: the branch to-do list, and what customers tell us

Where. On the **Dashboard** of every sales associate (card *Customer Service*) and in the menu **Customer Service** for the full list.

What is on it.

- **Restock due:** customers who bought a supplement that should be finished by now (the days one unit lasts are set per product). Customers who already bought it again are not listed.
- **Birthdays of our regulars:** the members who usually buy at your branch (the branch where they buy most), from 2 days ago to 7 days ahead. On the day itself the branch also gets a **notification**. A member whose birthday is today also gets the birthday voucher if the Owner switched that on.
- **Regulars we have not seen for a while:** members of your branch who last bought 46–180 days ago, best customers first.
- **Reservations to prepare** and the running **promos**.

After you approach a customer, press* Record result* (for a birthday: *Greeted*) and answer: *how* you approached them (phone call, SMS, WhatsApp, Viber, Messenger, in person) and *what came of it*:

- **Bought again**, **Will buy** (it reminds you on a date you choose), **No answer, try again** (stays on the list, due again on the date you choose), **Wrong or dead number**.
- **Not buying again** needs the **reason**: found it cheaper in another store, bought online, not working out / no results, did not agree with them, did not like the taste, switched brand, still has stock, we did not have it, no budget, stopped training, coach / doctor advised something else, worried about authenticity, unhappy with our service, store too far, waiting for a promo, or Other (write it in the note). For *cheaper elsewhere* write where and at what price.

The result also goes into the member's contact log. Product or service trouble (not working out, side effects, authenticity, service) is sent to the Sales Manager at once.

Results recorded lists everything recorded at your branch. **Why they do not buy again** (Sales Manager, Owner, auditors) adds it all up: how many were approached and came back, the reasons, by branch, by item, by staff member, and what customers said.

Promos: for all branches, or separately for the franchises

Who issues. The **Owner** and the **Head Auditor**, under **Promos**: choose **All branches (not franchises)** or **Franchises only** (these are separate promos), the promo name, the dates, what the customer gets, and optionally **promo prices** for items.

What happens. A numbered **memo** goes to everyone concerned (branch staff, in-charges, the Sales Manager and agents; or franchise owners, franchise associates and the Franchise Coordinators) and a **highlighted PROMO notice** (a coloured row in Notifications). While the promo runs it shows as a coloured strip on the **dashboard** and at the top of **New Sale** for the people it is meant for. Franchise staff never see a branch promo and branches never see a franchise promo.

Prices. An item with a promo price is sold at that price **by itself at New Sale** (no special-price approval), for branch sales on the retail price list (cash / online; credit-card sales keep the card price), and for franchise promos when the Franchise Coordinator records a franchise sale. A price typed by hand wins, and a member price is used when it is lower. When the promo ends or is cancelled the normal price returns. The Owner or the Head Auditor can **Cancel promo** with a reason: everyone concerned is told and the memo is withdrawn.

Replacement price difference: how it was paid, and the day

When the replacement is given (Replacement Tickets → open the ticket → *We gave the replacement*): choose the product (the box shows your choice; the price is filled in from the price list and you may change it) and the **day the replacement was given**. The stock leaves on that day, so that day's inventory changes. The Head Auditor approves every replacement; if the day is already closed the request says so.

When the customer pays the difference (or is refunded): *Record the payment of the difference* (or *the refund given*). Choose **how**: cash, online (pick the bank / GCash account) or credit card, and the **day** it was paid. It then appears in the **Daily Sales Report of that day under Replacement payments**, apart from normal sales: cash joins the day's cash and deposit, online and card show with their account. The Excel report has its own sheet *REPLACEMENT PAYMENTS*; Daily Close shows it in the expected cash. A sale made on credit puts the difference on the customer's receivable instead.

A day that is already closed needs the **Head Auditor's approval** (My Approvals → *Replacement payment dated on a closed day*). Until then it is not in that day's report. If it is not approved, record it again with the right day. The Head Auditor recording it himself needs no second approval.

Choosing items from a search box

Wherever you choose **one** item from a search (a product, an outlet, the product given in a replacement…), the item you pick is shown **inside the box** with a *✕ change* button, so there is no doubt what is chosen. Prices that depend on the item (the replacement price, a member price, a promo price) are **filled in for you** and can always be changed. At **New Sale**, member prices and running promo prices fill the price box by themselves; edit the box to charge something else.

Email and SMS campaigns

1. Open **Email & SMS**. The two boxes at the top say whether email and SMS are ready. Setup (once, in `api/.env`, then restart): **email** = `SMTP_URL` (your mail server) and `MAIL_FROM` (the one company email all

blasts come from), **SMS** = `SEMAPHORE_API_KEY` (and `SEMAPHORE_SENDER`), and `PUBLIC_URL` (the web address customers use, so the unsubscribe link works).

2. Choose **Email blast** or **SMS blast**. **Send to** the Wheysted members, or everyone in your customer database (members plus customers who left a number or email at the counter). Narrow it to a **segment** (for example At risk or Lapsed) and / or to those **who bought a given item**. Press **Count who will receive it**: people who unsubscribed, did not agree, or have no valid email / mobile number are left out and counted.
3. Type the message. You can use **{name}**, **{firstName}** and **{memberNo}**. An SMS can be up to 480 characters (3 SMS). Every email gets an **unsubscribe link** (the person is taken off the list at once). Press **Send me a test** first.
4. **Prepare campaign**, open it in the list, check the count and press **Send**. It goes out one by one; the page shows sent / failed / left out and each person's result. A campaign that could not go out because email / SMS was not set up can be sent again after the setup.
5. Send sparingly: customers can unsubscribe, and SMS has no unsubscribe reply.

Searching any list

Every list with six or more rows has a **Search this list** box above it. Type part of a name, a number, a product, a branch or a date: every word you type must appear in the row (in any order), and the other rows are hidden. Clear the box to see everything again. In long lists the **column titles stay frozen** at the top while you scroll the rows (and the totals row stays at the bottom), so you always see which column is which. A search on the list only looks at what is loaded; on **6-Pack Card** the search looks through the whole period you chose (change **from / to** to look further back), and on **Notifications** it looks through all your notifications.

Searching your notifications

On **Notifications**, type in the search bar to find the notifications about one item: a product, a DR / form number, a branch or a person. Every word you type must appear in the notification (in any order); the search looks through all your notifications, not only the latest ones.

Opening AR: customer credit from before GWS-ERP

Invoices that customers had not paid before GWS-ERP started are entered once, per branch, so every branch can follow them up and collect them in the system.

1. **Accounting Head or Accounting Associate:** AR & Collections → **Opening AR** → **+ Enter opening AR**. Choose the branch, the customer type (Dealer, Franchisee, Agent or Other) and the customer; type the DR / SI no., invoice date, due date and the balance still owed. Tick **There is a PDC** only when there is a cheque. Press **Send for the Owner's approval**. For many invoices use Imports → **Open AR**.
2. **Owner:** My Approvals → **Opening AR** → check them, then **Tick all** and **Approve all** (or reject with a reason).
3. **The branch:** once approved, the invoice appears in its AR & Collections with the due date, reminders start, and the branch is notified. Collect it like any credit sale.

An invoice date in the future, a DR / SI already recorded at that branch, or a PDC without cheque no. and date is refused. Opening AR is not posted to the books again: the AR beginning balance is in Periods & Opening.

Faster approvals: tick all

In **My Approvals**, every group (for example "Opening AR" or "Special price") has **Tick all** and **Approve all**. **Select all** at the top ticks every item on the page; then press **Approve selected** or **Reject selected** (a reason is asked where one is required). After a bulk approval, the page lists any item that could not be approved and why.

Finding transfers, and franchises in every list

On **Transfers & Pull-outs**, **View** shows all, only pull-outs (sent) or only transfer-ins (received). **Branches** lets you tick the branches to see (none ticked = all). For the Owner and auditors, pull-out and transfer-in apply to the ticked branches; for branch and warehouse staff they apply to their own location, and the ticks choose the other side.

In every list of branches, a franchise shows **(franchise)** beside its name (and a consignee **(consignee)**).

Flavors and expiry dates: choosing the right item

A SKU is **one item** in the inventory, counted once. Its **flavors** and **expiry dates** are told apart per batch:

- **Receiving:** each line has a **Flavor** (choose from the product's list or type a new one) and an **Expiry**. Same item in two flavors or dates: **+ another flavor / expiry**.
- **New Sale and Transfers:** only items the branch has on hand are listed, with the quantity. When an item has more than one flavor or expiry, a list opens: choose the one you are selling or sending (the oldest is first). The line shows the flavor, expiry and how many are left of it; asking for more than that is refused.
- **Stock on Hand:** the Flavors column shows how many of each flavor. Old stock without a flavor: Batches → **Set flavors** (Head Auditor, Asst Auditor, Warehouse In-Charge, the branch). The total does not change.
- **Products:** the Owner or the Head Auditor keeps the list of flavors on the product.

Checking a sale before it is saved

Review sale opens a check of everything: branch, DR / SI, channel, customer, payment and account, every item with its flavor and expiry, quantities, prices, special prices, fees, incentive and total. Press **Confirm and save sale** when it is right, or **Go back and edit**.

Agent incentives

1. **Sales Manager** (menu: Agent Incentives): choose the month; each agent's total sales at every branch is listed. Type the incentive (% of sales or an amount) and press **Confirm**.
2. **Accounting Associate, Accounting Head, then the Owner** approve it in My Approvals.
3. The **release form** (AI-000001…) is made and goes to **HR**: print it, have the agent sign, press **Agent signed**.
4. **Accounting** presses **Tag as released**: bank transfer, GCash, cheque or cash, the account, the reference and the date.

The agent sees their own incentive and its status on the same page.

The Owner may approve anything

The Owner is the highest authority. In My Approvals, **Show everything waiting** lists every request waiting with anyone; the Owner may approve or reject any of them, and the decision is final. The dashboard's "Pending your approval" shows how many more are waiting with others.

Changing a closed day (post-close edit)

After the Daily Sales Report is submitted, or for an earlier day, a sale or an expense can only be changed by request:

1. **Daily Close & Deposit** or **Daily Sales Report** → **Change a closed day** → choose the date and the sale or expense.
2. Choose **Correct details** (DR / SI no., payment mode, customer, delivery fee; for an expense: amount, payee, notes) or **Void it**.
3. Choose the **reason** (required) and add details → **Send post-close edit request**. The card shows who approves it: the Head Auditor and the Asst Auditor (both), or the franchise owner. Nothing changes until it is approved.

HR and the Head Auditor are told of every request. **Three in one month, or three days in a row, is flagged**; HR is advised to refer it to the Owner as negligence of duty. Review the report carefully before submitting so that edits are rarely needed.

Your password

Your account is personal and you answer for everything done under it. Press the **key icon** at the top right (**Change my password**) any time: type the current password and a new one of 10 or more characters. Never tell your password to anyone, including co-workers, supervisors, HR or the Owner; nobody can see it. If you forget it, the Owner can only give you a new temporary one. HR is notified whenever the Owner or anyone opens a new user account or employee record.

Credit-card and e-commerce prices

A sale paid by **credit card** uses the credit-card price: SRP ÷ 0.96, for example ₱1,250.00 becomes ₱1,302.08 (the price memo of September 21, 2026 shows whole pesos; the system keeps the centavos). A TikTok, Shopee or Lazada sale uses that platform's price list. The Owner sets both in **E-com & Card Prices**: the card fee %, how it is applied, and each platform price (or imports the masterlist again). Lazada follows Shopee until it has its own prices.

6-Pack Card

Search: on **6-Pack Card**, choose the period (from / to) and type in **Search the stickers given and cards redeemed**: customer, mobile, email, DR / SI, card number, branch or associate. Both lists (Stickers given and Cards redeemed) are filtered; the totals above stay for the whole period.

1. On **New Sale** tick **6-Pack sticker given** and type the customer's full name and mobile number. One sticker is recorded for each supplement on the DR.

2. At six stickers (from any branch) the customer earns a ₱300 card. Open **6-Pack Card** → **Redeem a card**: type the number → **Find** (shows the balance) → complete name, email and address → **Redeem**.
3. The ₱300 is booked as your branch's **6-Pack Card** expense, paid from the cash on hand, tagged to the customer.
4. An old paper card: tick the box, type its number and attach a photo; the auditors and the Owner are told.
5. **Customer cannot be tagged** (data missing): the **Head Auditor** sends the request on the 6-Pack Card page (branch, what is known, the reason) and the **Owner approves** in My Approvals. The card is then booked as usual and marked as an override.

Franchise AR (what franchises owe GWS)

Goods sent to a franchise are billed at the franchise price when it receives them and are due 30 days later. After the due date a **2% penalty (once) and 0.1% a day** on the unpaid goods are added (memo of July 31, 2026; for ₱100,000: 1 day ₱2,100, 5 days ₱2,500, 10 days ₱3,000, 30 days ₱5,000). Payments settle the penalty first, then the interest, then the goods. If the received quantities change (a transfer difference is resolved), the invoice changes by itself and the Owner, auditors, Accounting, Franchise Coordinators, the sales associates involved and the franchise owner are told. The franchise owner asks for an extension on the page; the Owner decides and the others are flagged. Unpaid two months after the due date, the account is flagged and the page shows the recommended actions; the Owner may put the franchise on cash-before-delivery or waive charges.

Memorandums

Memorandums lists the memos addressed to you: open one and press **I have read this memo**. HR, the Owner, the Franchise Coordinators and the Head Auditor can **Write a memo**: choose who it is for (everyone, franchise owners, franchise associates, a role, a branch or named people), the subject, the text, an optional table and the people who sign. It is numbered by itself (2026-Q3-046), everyone addressed and every signer is notified, and **Print / download PDF** gives the company layout. The Owner's memos always carry AL MARVIN VINLUAN (President) and MICAH VINLUAN (Manager).

Bank deposit slip and verification

On **Daily Close & Deposit** the coloured days on the calendar (and the boxes beside it) are the days whose cash is not deposited yet: press one, choose the bank, **attach the deposit slip** (required) and **Record deposit**. The Audit Associate checks the slip against the amount, bank and date in My Approvals, then the Accounting Associate does the same. If either does not accept it (a reason is required) the branch, the Head Auditor, the Accounting Head and the Owner are told; fix it under **Deposits recorded by this branch** and send it again.

E-commerce margin analysis and waybill report

Waybill Report (E-comm Associate, Head Auditor, Owner): upload the TikTok, Shopee or Lazada shipping labels (PDF). Each label gives the order, tracking number, quantity and weight; choose the product once (the same platform and weight are filled in next time, to confirm). The report shows the SRP from the platform price list, the platform fees at the rates you set (or copy from posted payouts) and the total order income. **E-com Margin Analysis** (Owner): each platform's fees, ads and cost of goods, the margin against the target and the price that keeps it; add ad expenses at the bottom.

Selling to a franchise: price, plastic and shipping

1. On **New Sale** choose the channel **FRANCHISE** and pick the franchisee. The **franchise price** fills in by itself for every item; you may change a price (a price below the list needs the Owner's approval as any special price). Sales Associates of any branch, including the Warehouse store, and the Franchise Coordinators can do this. The **Franchise Coordinators** have **New Sale** too: they record sales **from the warehouse only** (the warehouse is chosen for them), to franchises and for every other channel (walk-in, dealer, agent, delivery, online…) and payment mode.
2. **Plastic bags** are charged to franchises: Large ₱4, Medium ₱3, Small ₱3, XL ₱5 each (the Owner can change these under Products & Prices). For stores and other customers a plastic stays free (₱0); if the bag was sold, type its price on the line.
3. **Shipping charged to the franchise:** when you pick a franchisee, choose **To follow** (the usual), **Type the amount now**, or **No shipping charge**. With *To follow* the Franchise Coordinator is told, and must fill in the amount within **2 days** on **Franchise AR → Shipping charges billed to franchises → Fill in the amount**. It becomes its **own franchise invoice** (FAR-SHIP-…), separate from the order, due after the usual terms, with the same penalty and interest. The franchise owner, the Owner, the auditors, Accounting and the Coordinators are told when it is tagged, when it is billed, and every day it is late.
4. A change after it is billed, or more time for the 2 days, is asked for by the Franchise Coordinator (**Ask to change / Ask for more time**) and decided by the **Owner** in My Approvals.
5. A **franchise owner** sees every transaction of their own franchise only (sales, transfers, expenses, AR) and creates their own sales and expenses.

E-commerce: the "To ship" export becomes the pick list

1. In TikTok Seller Center open the orders **To ship** and **Export** them (CSV or Excel). The file does **not** need a seller SKU: the product title, the variation (flavor, size) and the SKU ID in it are read.
2. **E-commerce → Orders → Choose file and upload.** All new orders go on **one pick list**: a draft pull-out from the Warehouse with the items totalled and the oldest expiry first. Orders already uploaded, cancelled orders, and orders the Warehouse cannot cover are skipped and listed.
3. **A product seen for the first time:** the page shows what the listing looks like in GWS (for example *Prothin Whey Ripped 10s (Vanilla)*). Press **Use this** (or **Accept the best match for each**, or search another product). It is remembered; upload the same file again.
4. Check the draft, **print the picking list**, and press **Submit**, or tick **Send to the Warehouse In-Charge right away** before uploading. The In-Charge approves and packs.
5. When the shipping labels (waybills) are ready, upload the PDFs on **Waybill Report**: it gives the SRP, the platform fees and the total order income.

Deleting an unfinished draft

A draft that was not submitted (a transfer / pull-out, a supplier delivery, a count sheet or a store inspection report) can be deleted: open it and press **Delete draft**. Only the person who prepared it, the Warehouse In-Charge (warehouse forms), the Head Auditor (count sheets and inspections) or the Owner can. The **form numbers adjust by themselves**: the drafts after the deleted one move down one number (their owners are told; print them again if you already printed them), so there is no gap. A form that is already submitted or approved keeps its

number; the number that cannot be closed up is used by the next new form. A sent or approved form is never deleted: it is cancelled (void) with a reason.

The forms behind a stock movement

In **Inventory Reports → Daily Inventory Report**, the figures under **Receive, Transfer In, Returns, Pull Out, Other Out and Adj** are links. Press one to see the forms that made that movement: the Pull-Out and Transfer-In forms (each side sees its own copy), the Supplier's Form with the supplier's delivery receipt, the count sheet, the write-off or the replacement ticket, each with its attachments. The **Sales** figure is a link too: it lists the DRs behind it, each linking to the sale and to the Daily Sales Report of that day (see the next section).

Printed forms: the checker's column

The printed Pull-Out, Transfer-In, DR (sales), Supplier's Form and Count sheet have a blank **Checker's qty (write by hand)** column at the far right. The person who double-checks the goods writes the quantity counted there, then signs "Checked by".

Marketing and BO pull-outs

Any branch (or the warehouse) with stock can give stock out to **Prothin Marketing**, **GWS Marketing** or **BO** (bad orders): in Transfers & Pull-outs choose it under **To → Stock given out**. Tick **Endorse to Accounting as an expense** if Accounting should book it. The **Head Auditor approves**; the stock then leaves your branch at once (nothing is confirmed at the other end). If it was endorsed, Accounting accepts it in My Approvals and books it at cost (BO as spoilage, marketing as marketing expense). Not endorsed at the start? On the approved form press **Endorse to Accounting as expense** later. **Marketing & BO Pull-outs** (auditors, Accounting, Owner; a branch sees its own) lists everything given out per destination, item by item, with the units already expensed and those waiting for Accounting.

Replacement tickets

A customer returned an item. Open **Replacement Tickets → Customer returned an item** (or press the link on the sale's page): find the **DR / SI** it was sold on (DR number, customer name or mobile), choose the item, the quantity (not more than was sold and not already returned) and the reason, and attach a photo. The ticket (RT number) names the DR, the customer and the sales associate. The auditors, Accounting, the Owner, the sales associate of that DR and every branch are told. **Any branch except a franchise** gives the customer the replacement and presses **We gave the replacement** on the ticket: the same product or another one, the quantity and the price (the price list by default). The **price difference** against the DR is worked out by itself: the customer pays it, or is refunded / credited. The replacement leaves that branch's stock, the **Head Auditor approves** (if not approved, the stock goes back and the ticket opens again), and the ticket closes. The branch confirms **The customer paid the difference / The refund was given**, and Accounting is told. A return older than 30 days is flagged. **Items we return to a supplier.** Open **Return items to a supplier**: the product, quantity, supplier and reason. The **Head Auditor approves**; the stock leaves then. The ticket is tagged to the supplier and **stays open until replacement items arrive**: on Supplier Deliveries choose the ticket ("This delivery replaces a ticket") when you receive them. Part of the quantity keeps it open; enough arrival closes it, and the value difference (a different product, another cost) is worked out. Nothing else closes it. Open tickets are reminded to the auditors,

Accounting, the Owner and whoever opened them (customers after 3 days, suppliers after 7), and the page shows which suppliers still owe us units. **Accounting entries** (when automatic posting is on): a replacement given is expensed at cost against the branch's inventory; the price difference is booked when the branch confirms it (cash, or the customer's account on a credit sale; a refund reduces sales); items returned to a supplier become a receivable from that supplier until the replacement arrives, and the arrival clears it against what we owe the supplier.

Restock & Purchase Orders

This is how stock is reordered. The **Head Auditor** starts it, the **Owner** decides, the **branches** act on it.

1. **Generate (Head Auditor).** Restock & Purchase Orders → **Generate a restock request**. Choose how many days of sales to average (default 30), how many days of stock each branch should hold after restocking (default 30) and how many days the warehouse keeps for itself before it gives stock to branches (default 7). Tick the suppliers (none ticked = all). The system makes **one purchase order (PO-year-number) per supplier**. Products without a supplier are listed so they can be fixed.
2. **Read it.** For each item the order shows the warehouse stock and, per branch: **on hand, average sold per day, days left, what it needs**, then two suggestions in the same table: **Suggested transfer** (stock already in the company that can be moved first: the warehouse above its own reserve, otherwise the branch with the most surplus) and the branch's **share of the order**. The **suggested order** is what all branches need, less what the warehouse can give and less what is already on order from earlier POs.
3. **Change anything.** Every number is a box: the quantity to order, the quantity to transfer and from where, each branch's share, a note per item. You can **add an item** the suggestion did not list. The Head Auditor edits while it is a draft; once it is with the Owner, only the Owner edits.
4. **Send to the Owner for approval.** The Owner approves in My Approvals or on the order's page (an order made by the Owner is approved at once). Then the Head Auditor, the Warehouse In-Charge and **each branch** are told. A branch that gets stock from existing stock is asked to **create the pull-out form now**; a branch with a share of the order is told it will receive it.
5. **Transfers from existing stock.** The Owner may press **Ask the Head Auditor to make the transfers**: the Head Auditor, the Warehouse In-Charge and the branches are told again, with the quantities.
6. **Send to the supplier.** Print the **supplier copy** (items and quantities only, no branches, no prices) and press **Mark as sent** with the expected delivery date.
7. **Deliveries.** On Supplier Deliveries choose **This delivery is for a purchase order**. The order shows received against ordered (**Partly received** / **Received**) and the branches are told when their goods have arrived so they can pull them out.

Three printed copies (buttons on the order): the **supplier copy** (no branches), the **Head Auditor / Owner copy** (every branch with its days left, transfers and shares) and the **warehouse copy** (per branch: what to pull out now from existing stock, and its share when the order arrives). Branches see only their own part, under **Restock Plan**.

Ordering even when the data says no need. If the average sales say nothing is needed, **Generate** tells you so and offers **Order anyway**. In the Generate box you can also choose, for the supplier(s) you tick: **Every item of the supplier** (all its items are listed at 0, each branch has a row, and you type the quantity and the share of each branch) or **A blank order** (you add the items yourself with *Add an item*; each added item gets a row for every branch showing its stock now). The suggestions stay as they are; your numbers override them, and the order goes through the same approval.

Orders and money. A PO is a plan and a request to the supplier; it books nothing. The supplier's delivery (and its cost, approved by the Head Auditor) is what adds stock and what is owed.

Franchise availability and orders (from the warehouse stock to a DR)

This is how franchises order from the warehouse, step by step. Menu: **Franchise Orders**.

1. **Franchise Coordinator: generate the availability.** Franchise Orders → **Generate availability**. The system lists the products the warehouse has in stock (with the flavors in stock). Press **Send to the warehouse**.
2. **Warehouse In-Charge (or Associate): check it.** Open the availability. Under **Offer** type the quantity you can really give and the flavors available for each product; **remove** a product you cannot give to the franchises. You cannot offer more than the warehouse has. Press **Send to the Franchise Coordinator**.
3. **Franchise Coordinator: send it to the franchises.** Read the edited availability, tick the franchises (or all) and press **Send to the franchises** (you may send it back to the warehouse if something is wrong).
4. **Franchise owner (or associate): order.** You get a notice. Open **Franchise Orders**: you see only the available products with their flavors and your franchise price. Type **I order** (quantity) and the flavors you want, then **Send my order**. You cannot order more than what is offered (the quantity left is shown, and other franchises' orders count).
5. **Franchise Coordinator: picklist.** Open the franchise's order → **Make the picklist**. The picklist (PO) is made and sent to you: **Print the picklist (PDF)** for the warehouse to prepare, then press **Send to the warehouse for the final check**.
6. **Warehouse: final check.** The In-Charge checks the prepared goods against the picklist and presses **Approve** (or sends it back with a note).
7. **Franchise Coordinator: make the DR.** Once approved, **Make the DR** (choose cash or on credit with the due date). The DR is a normal warehouse sale to the franchise: stock leaves the warehouse and the franchise now sees it under **Franchise DRs** (next section) and in Franchise AR as **Unpaid goods**.

Franchise DRs: connected to the franchise

Every DR made for a franchise by **any main branch or the warehouse** (not only the warehouse) now tells the franchise and goes through the same steps:

- The franchise (owner, or the associate if the owner allows it) gets a notice and sees the DR under **Franchise DRs**: items, flavors, quantities, prices and total, and whether it is on credit.
- **Confirm receipt** after checking the goods: the franchise's stock goes up then. (Do not also make a transfer for the same goods, or the stock is counted twice.)
- **Report a problem** (a note is required): the Franchise Coordinator is told.
- **Franchise Coordinator: correct the DR.** Open the sale → **Correct this franchise DR**: change quantities, flavors or prices. The DR keeps its **number and date**, the old one is voided, stock and AR follow, and the franchise checks the corrected DR again. A DR the franchise has already received cannot be edited: the franchise reports the problem first.

Head office (Admin, auditors, Accounting) sees every franchise DR; a franchise sees its own only.

Franchise AR: Unpaid goods, shipping, penalty and interest

Each franchise on **Franchise AR** shows its balance **apart**: **Total goods AR** (invoices for goods + goods delivered on a DR and not paid yet), **Total shipping AR**, **Total penalty (2%)**, **Total interest AR** and the **Total due** (all four added). The **Unpaid goods (DRs)** table lists each DR with its due date, balance, penalty, interest and total; click a DR to open it. The franchise sees the same under its own Franchise AR.

- **A DR on credit earns penalty and interest like an invoice.** From the day after its due date: **2% once** on the unpaid balance, then **0.1% a day** on what is still unpaid. They are worked out again every day from the due date and the payments, so you never have to run anything: if a sale is edited (date, due date, amount) the interest follows by itself.
- **The due date cannot be before the date of the sale.** New Sale refuses it (and the date box starts at today). A DR whose due date has passed shows "x d overdue" with its penalty and interest.
- Payments on a DR are recorded under **AR & Collections** and lower the balance; interest stops growing on the part that is paid.

Branch requests to the warehouse

When a branch asks the warehouse for stock (Transfers → **Request stock**), the request appears to the **Warehouse In-Charge** (and associates) under **Requests from the branches**, with the products and quantities already filled in. The In-Charge only edits the quantities (or removes an item), then **Prepare the pull-out** (a draft pull-out with those items is made) or **Decline** with a reason. The branch is told either way.

Promos: percentage, internal quantity and the promo tick

- **Percentage.** When issuing a promo, choose **Discount % off** from 20%, 30%, 40%, 50%, 60% or 70% (or type a fixed promo price). The promo price is worked out from the tier price.
- **Internal quantity.** Each product of a promo has an **internal quantity** (how many may be sold on promo). It is for the Owner and Head Auditor and is not shown on the branch memo. The promo list shows **sold / left** per product; **See promo sales** lists every sale made on it.
- **Promo tick in New Sale.** While a promo is running for a product, every sales associate sees a **Promo price** tick on that line: ticked = sold at the promo price, unticked = sold at the normal price. The choice is saved so the promo can be monitored.

Proof of payment: upload it once, it prints with the report

No paper copies are needed any more. Whenever money arrives other than as cash, the branch **uploads the proof** where it records the payment, and the system will not save it without the proof:

- **Online sale** (bank / GCash): a screenshot of the payment. **Card sale**: a photo of the card terminal slip.
- **A sale paid by a post-dated cheque** (With PDC ticked): a photo of the cheque.
- **AR collection** by online, card or cheque (AR & Collections): the screenshot, slip or photo of the cheque, and the account it was deposited to.
- **Replacement: price difference paid or refunded** (Replacement Tickets): the **amount**, how (cash, online, card), the **account**, an optional **reference / approval number**, the **proof** and the **day**. If the customer paid in

more than one way (for example ₱300 cash and ₱150 GCash), press **Paid in another way too (split)**: each way has its own amount and proof, and the amounts must add up to the price difference.

- **Franchise payment** by transfer, GCash or cheque (Franchise AR): the screenshot or the photo of the cheque.
- **Bank deposit slip** (Daily Close & Deposit): already required.

Cash needs no proof. A payment of money the customer paid online affects that day's inventory and sales, so it is recorded on the day it was received.

The printed report carries the proofs by itself. The **Daily Sales Report** (PDF or Excel) ends with a **Proof of payments** section: a **legend** (ON online, CC card, CQ cheque, AR collection, RP replacement payment, DS deposit slip), a **checklist** (reference, document, customer, how and account, amount, date, whether the proof is there) and then **every picture** under its reference. Beside each sale in the report there is a **Proof** column with the same reference (for example ON-3), so Accounting looks at a line and finds its proof at once. A payment without a proof is shown in **red** as MISSING. In Excel the same appears on a **PROOFS** sheet with the pictures beside each row. Files that are not pictures (for example a PDF) are listed by name and stay in the system.

Payment Proofs (Reports) lets Accounting and the auditors see the proofs of any branch (or all) for a day or a period, choose the types, show only the missing ones, switch between **Pictures** and a **Checklist**, and press **Print with the pictures (PDF)** or **Excel**. Branches see their own only.

Page names and what each page is for

- Every menu item has a descriptive name (for example **Supplier Deliveries** or **Transfers & Pull-outs**).
- The top of each page says in one line what the page is for.

Sales Report and Sales Graphs

- **Sales Report:**
  - Choose the branch (or **All branches**) and the period, or press **Today**, **This month**, **Last month** or **This year**.
  - It shows total sales, number of sales and average per sale, products sold, how customers paid, sales by channel, per branch (with each branch's share), per day and the top products.
  - Gross profit shows only for people allowed to see cost. **Excel** exports the same report.
- **Sales Graphs:**
  - Choose the month. The first graph shows each branch's running total for the month so far, each branch in its own colour; the second shows the whole company.
  - The third graph shows every month of the year: the column height is the company total, and the coloured parts are the branches.
  - Hover for exact amounts, or press **Show as tables**. Branch staff see only their own branch.

Form numbers

- Every form number starts with the branch code, then the form code, then the number. Example: **WA-DR-000123** is a West Ave sale.

- Form codes: DR sale, CN credit note, EX expense, PO pull-out, TI transfer-in, RC receiving, IC inventory count, DC discrepancy case, CF charge form, WO write-off, FR cash fund replenishment, SI store inspection, PC price change.
- Branch codes include WH Warehouse, WA West Ave, CS CSR, IM Imus, LG Laguna, DS Dasmariñas, VC Vito Cruz, MY Mayon, ML Malolos. Company-wide forms use HO.

Who can see supplier cost

- Only Admin (Owner), the Head Auditor, the Asst Auditor, the Audit Associate, the External Auditor, the Accounting Head and the Accounting Associate see what GWS pays suppliers.
- Everyone else, including sales and warehouse staff, HR, the Field Auditor and franchises, never sees supplier cost. Those fields are removed before the page is sent.

Troubleshooting

- **"Invalid credentials":** check the username and password (capital letters count). Ask Admin to reset your password.
- **Asked for a 6-digit code you do not have:** ask Admin. During testing the code can be switched off.
- **A page says you do not have access (403):** your role does not include that screen. Ask Admin if you need it.
- **"The day is closed":** use the post-close request instead of editing directly.
- **A sale will not save:** online and card sales need the payment account and proof; AR sales need a customer and due date; each product needs stock.
- **The whole app does not open (office Mac):** make sure Docker Desktop is running and the `pnpm dev` window is open. In a second Terminal window, in the gws-erp folder, run `pnpm login-check` and follow the fixes it shows.

Part 2 · Guide for each role

Each section below is the step-by-step guide for one role and lists only the work that role does. The Help page shows each person the guide for their own role under **My guide**. The processes everyone uses (signing in, notifications, form numbers, troubleshooting) are in **Guide for everyone**. The Admin (Owner) can read every role's guide to train staff.

Sales Associate (branch)

You run one branch: sales, expenses, stock received and sent, the weekly count, the end-of-day report and the bank deposit. You never see supplier cost.

Start of the day

1. Sign in with your own account (never share it). Open the **Dashboard**.
2. Read the red and amber cards first:
    - **Weekly count sheet** not yet done this week.
    - **Discrepancy** with days left to explain (in bold red).
    - **Cash on hand** not yet deposited, and its deadline.
    - **My charges** to acknowledge.
3. Check **Price updates** for new selling prices that apply to your branch.

Recording a sale (menu: New Sale)

1. Type the **DR / SI number** from the paper receipt.
2. Choose the **channel** (walk-in, delivery, franchise, dealer, agent, shipping) and the **payment mode**.
3. Add the items: type the name or SKU, or scan the barcode. Only items your branch has on hand are listed, with the quantity. Freebies are added at ₱0.
    - If the item has more than one **flavor or expiry date**, choose the one you are giving the customer (the oldest is listed first). The line shows the flavor, expiry and how many are left of it.
4. Payment details:
    - **Online (bank / GCash):** choose the account that received the money (for example **Gcash (GWS)**) and upload the screenshot.
    - **Credit card:** choose the account, then type MID, slip no., approval code and batch no., and upload the slip.
    - **AR / PDC (credit):** choose the customer and the due date; add the cheque details if any.
    - **Delivery:** choose the rider and type the delivery fee.
5. **Wheysted member:** if the customer is a member, scan their QR card (or type the member number, name or phone) under **Wheysted member**: the sale goes on their account and their details fill in. A new customer who wants to join: **+ New member** (name and mobile number). The member sees the purchase on their own member page.
6. **Incentive paid from the sale:** press **+ Add incentive expense**, choose the type (sales or rider/driver), who receives it and the amount. It is taken from the cash to deposit and recorded as your branch's expense.
7. A price lower than the list price is a **special price**: it is saved, and the Owner approves it.
8. Press **Review sale**. Check every detail on the review screen (items, flavor / expiry, quantities, prices, payment, customer, total), then press **Confirm and save sale**, or **Go back and edit**. Stock is deducted at once.

Mistakes on a sale

- Before today's report is submitted: open the sale in **Sales List** and **Void** it with a reason, then record it again.
- After the report is submitted (or on an earlier day): on **Daily Close & Deposit** or **Daily Sales Report**, use **Change a closed day**: choose the date, the sale or expense, then *Correct details* or *Void it*, and the **reason**

(required). The card shows who approves it (the Head Auditor and the Asst Auditor; at a franchise, the owner).

- HR and the Head Auditor are told of every post-close edit. **Three in one month, or three days in a row, is flagged** and may be referred to the Owner as negligence of duty, so review the report well before submitting. Every approved correction is logged against the person who made the document.

Expenses (menu: Expenses)

1. Choose the account (for example Meralco, Water), the payee and the amount.
2. Choose where the money came from: **Cash on hand** (the sales cash not yet deposited; it lowers the cash to deposit) or **Cash fund**.
    - The screen shows how much cash on hand the branch has. If the expense is more than that, a notice pops up and nothing is saved: pay it from the cash fund, or ask Accounting to pay it from the bank.
3. Attach the receipt.

Cash fund (menu: Petty Cash Fund)

- Expenses paid from the fund lower its balance.
- Press **Replenish from today's cash sales** to top it back up; this lowers today's cash to deposit.

Customer credit and collections (menu: Customer Credit)

- Tick the invoice, type the amount received and send it. It waits for Accounting's approval before the balance goes down.
- **Selling on credit (New Sale → payment "AR / PDC"):** choose whether the customer is a **Dealer**, **Franchisee**, **Agent** or **Other customer**; only that kind is listed. Type the due date. Tick **There is a PDC** only when the customer gave a post-dated cheque, then type the bank, cheque no. and cheque date.
- Every morning you are reminded of your branch's receivables that are overdue or due within 7 days, nearest due first. The dashboard lists them the same way.
- If Accounting rejects a payment you entered, the notification gives the reason (for example "Wrong amount"). Fix it and send the payment again.
- **Credit from before GWS-ERP:** Accounting enters it and the Owner approves it. It then appears in your AR & Collections (you are notified) and is collected like any credit sale.

Stock

1. **Asking for stock:** in Transfers & Pull-outs, press **Request stock from the warehouse**, add the items and send.
2. **Receiving a delivery:**
    1. Open the incoming transfer.
    2. Tick each line that arrived complete. For a line that did not, type the quantity you actually got and what is wrong (for example **1** of 2, "only 1 in the box").
    3. An item that arrived but is **not on the form**: press **+ An item arrived that is not on the form**, pick it and type the quantity.
    4. Press **Confirm receipt**. Only what you received goes into your stock.
    5. If there is a difference, the steps start by themselves (see **When the received quantity is different** below). You are told of each step.
    - **Finding a transfer:** use **View** (Outgoing pull-outs or Incoming transfer-ins) and **Branches** (tick the branches to see; none ticked = all). Franchises are marked "(franchise)" in every list.

3. **Returning stock:** prepare a pull-out to the warehouse. The "From" is always your branch. Choose the flavor / expiry of each item.
    - **Stock without a flavor** (from before flavors were recorded): Stock on Hand → Batches → **Set flavors**, split the quantity by flavor and save. The item's total does not change.
4. **Expired or damaged items:** keep them apart and tell the auditors (or return them to the warehouse on a pull-out). Write-offs are decided by the auditors, not the branch.

When the received quantity is different

1. The **Head Auditor** checks the difference first.
    - Confirmed: the sending branch is asked to agree.
    - "Receiver miscounted": you get the items as on the form. Count again.
2. The **sending branch** agrees or disagrees within **2 days**. If they do not answer, or they disagree, the **Owner** decides.
3. When the difference is confirmed, an adjustment form is made automatically with the same number plus **-002** (for example WH-PO-000012-002). It returns the missing items to the sending branch's stock; items received that were not on the form get a **-003** form. The original form stays as it was.
4. HR is told of every case.

Items your branch sent that were not received as on the form (menu: My Approvals)

- The receiving branch reported a difference and the Head Auditor confirmed it. Check your shelves and packing, then **Agree** (the -002 form is made) or **Disagree** with a note (the Owner decides). Answer within 2 days; a reminder comes after 1 day.

Weekly count sheet (menu: Stock Counts)

1. Press **Start my weekly count sheet**. Every item is listed:
    - first the items the system has at your branch, with their beginning count;
    - then the items not in the system.
2. Type the **actual count** for every item in the first group. In the second group, type a number only if you find the item; blank means none.
3. You may **Download sheet (xlsx)**, fill the "Actual count" column on paper or in Excel, and **Upload filled sheet**.
4. Press **Submit count**. The sheet is locked; a correction needs the Head Auditor's approval.
5. If there are differences, a **discrepancy case** opens. You, the auditors, the Owner and HR are notified.
6. You have **7 days** to press **Explain** on the case. If your explanation is accepted, nobody is charged. If there is no explanation, or it is rejected, the shortage is charged at franchise price and HR splits it among the staff.

End of the day (before 8 PM)

1. **Daily Close & Deposit:** count the money by denomination and save the count. A shortage may be charged to the staff on duty.
2. **Daily Sales Report:** review every number on the screen, or open **Review report (Excel)** / **Review report (PDF)**, and compare it with your DR/SI slips, card slips, receipts and the cash you counted.
3. Press **Submit today's report…**. Tick each item of the review list (sales, card and online payments, expenses, money breakdown), tick **"I acknowledge that this Daily Sales Report is true and correct"** and press **I agree — submit**. Today is then closed for your branch; later changes need a revision request.
4. You are reminded at **7:30 PM**. If the report is not submitted by **9 PM**, it is submitted as it stands, and the Head Auditor, Asst Auditor, Audit Associate and HR are notified.

Bank deposit of the cash (menu: Cash on Hand)

1. Deposit each day's cash within the days allowed for your branch (shown on the page and the dashboard).
2. Record the deposit in **Daily Close → Bank deposit**: amount, bank account (a bank or **Gcash (GWS)**) and deposit date, for the sales day it covers.
3. If you cannot deposit on time, press **Request extension** on that day, choose the new date and give the reason. The Head Auditor **and** the Owner must both approve.
4. When a day is due, the auditors are reminded. Past the deadline without an approved extension, HR is told to issue a **Notice to Explain**.

Your pay (menu: My Pay & Charges)

- See only your own payslips and charges. Press **Acknowledge** on every new charge.

How your branch is doing

- **Sales Report:** your branch's sales for any period (today, this month, last month or your own dates), with payment modes, top products and a per-day table. Export it to Excel.
- **Sales Graphs:** a graph of your branch's sales this month so far and month by month this year.

Customers who may have finished their supplements (menu: Customers & Follow-ups → Re-order follow-ups)

1. When a customer with a contact number or email buys a product that has "days to consume", a reminder is set for the day it is probably finished. That morning you are notified.
2. Open **Re-order follow-ups**: call the number (tap it on a phone), or press **SMS** / **Email**. The Owner's message is filled in; you may edit it before sending.
3. Press **Contacted** after you reach the customer, or **Dismiss** if it no longer applies.
4. The customer list also shows the **items each customer ordered**.

Consignment (menu: Consignment)

1. **Send goods to a consignee:**
    1. Choose the consignee (the Owner creates them) and add the items.
    2. **Save draft**, **Print draft** if needed, then **Submit for approval**.
    3. The Head or Asst Auditor checks it first, then the Owner approves. Stock leaves your branch only after the Owner's approval.
2. **Record consignee sales:**
    1. Choose the consignee and the period, then add the items sold.
    2. Prices are filled in from the agreement and you may edit them.
    3. **Print draft**, then **Submit for approval**: auditor first, the Owner last. The consignee then owes the amount.
3. **Goods returned by a consignee:** choose the consignee, the items and your branch → save, print, submit. After approval, confirm the goods when they arrive.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

6-Pack Card stickers (customers who buy six supplements):

1. On **New Sale**, tick **“6-Pack sticker given”** and type the customer's **full name and mobile number**. One sticker is recorded for each supplement on the DR; the DR shows ☑ and the customer is tagged. A voided sale takes its stickers back.
2. When the customer has six stickers (from any branch), open **6-Pack Card → Redeem a card**: type the mobile number and press **Find** (it shows the sticker balance), complete the **name, email and address**, and press **Redeem**. The ₱300 becomes your branch's **6-Pack Card** expense, paid from the cash on hand, so the cash to remit goes down by the discount.
3. A customer with an old paper card: tick “old paper card”, type its number and attach a photo. The auditors and the Owner are told.
4. The dashboard shows today's stickers and cards.

Prices: a sale paid by **credit card** uses the credit-card price (SRP ÷ 0.96, see the price memo) by itself; a TikTok, Shopee or Lazada sale uses that platform's price list.

Selling to a franchise (also from the Warehouse store): New Sale → channel **FRANCHISE** → choose the franchisee. The franchise price fills in by itself and may be changed. Plastic bags are charged to franchises (L ₱4, M ₱3, S ₱3, XL ₱5); for stores and other customers they are free unless you type a price because they were sold. Choose **Shipping charged to the franchise: To follow** so the Franchise Coordinator fills the amount within 2 days (it becomes a separate franchise invoice), or type the amount now.

Returns and give-outs: when a customer brings back an item, open a **Replacement Ticket** (find the DR) and photograph the item; any other branch can tick it once the replacement is given. To give stock to **Prothin Marketing, GWS Marketing or BO**, use Transfers & Pull-outs (To → Stock given out); the Head Auditor approves. An unfinished draft can be deleted with **Delete draft**; the numbers adjust by themselves.

Restocking: when the Owner approves a purchase order, you are told what your branch will receive: **stock moved from existing stock** (create the pull-out form now) and **your share of the supplier order** (told again when it arrives). *Restock Plan* shows both for your branch.

Proof of payment: for every online, card or cheque payment (a sale, an AR collection, a replacement price difference) upload the screenshot, the card slip or the photo of the cheque where you record it: it cannot be saved without it. For a replacement paid in two ways, press *Paid in another way too* and give each amount with its proof. The Daily Sales Report prints your proofs at the end with a reference beside each sale, so there is nothing to print and staple. Check *Payment Proofs* for anything shown in red.

Promo tick: while a promo runs for a product, the line in New Sale shows a **Promo price** tick. Tick it when the customer gets the promo price; leave it off when the normal price is charged. It is saved so the Owner can see how many were sold on promo. A DR you make for a franchise is sent to that franchise to confirm.

Edit a DR before the day closes: at the bottom of your **Daily Sales Report** the **DRs entered** list shows every DR of the day: click one to open it, or press **Edit** to correct items, quantities, prices, DR number, customer name, due date or notes. The DR keeps its date. After you submit the report the day is closed and Edit disappears (use a post-close edit request). In New Sale, the Wheysted member, phone / email and 6-Pack boxes show only for retail sales, not for Franchise, Dealer, Agent or Marketplace.

Warehouse Associate

You enter what comes into and goes out of the warehouse. You never see supplier cost. Your entries are checked by the Warehouse In-Charge before stock changes.

Supplier deliveries (menu: Supplier Deliveries)

1. Press **New**, then choose the supplier (by code) and type the supplier's invoice / DR number.
2. For each item, type:
    - **Qty** (bought);
    - **Free (freebie)**: items the supplier gave free, which are recorded as Other Income;
    - **Flavor** (choose from the list or type a new one), **Expiry** and **Batch #**.
3. Same item in two flavors or with two expiry dates: press **+ another flavor / expiry** and split the quantity. The item is still counted as one SKU; each flavor is chosen when it is sold or moved.
4. Under **Upload Supplier Delivery Receipt**, take a photo (or choose the PDF) of the supplier's DR / invoice, then press **Create draft** and **Submit**. The receipt is kept with the delivery; more files can be added on its page.
5. Approval steps:
    1. The **In-Charge** checks the goods against the supplier's delivery receipt and approves ("1. Waiting for the In-Charge to check the goods").
    2. The **Head Auditor** approves the cost ("2. Goods checked · waiting for the Head Auditor's cost approval").
    3. Only then is the stock added to the warehouse.

Sending stock out (menu: Transfers & Pull-outs)

1. Prepare a pull-out to a branch or franchise. Only items the warehouse has are listed. For an item with several flavors or expiry dates, choose which one to send (the oldest is listed first).
2. Print the draft if needed, then **Submit**.
3. Approval steps: the In-Charge approves first, then the auditors (between company locations) or the Owner (to a franchise). The receiver confirms what arrived.
4. **Branch requests:** when a branch asks for stock, the notification opens the transfer with that branch already chosen.

Stock returned to the warehouse

- Confirm what arrived. Your confirmation waits for the In-Charge before stock is added.

Edits by the In-Charge

- When the In-Charge changes one of your documents, it appears in **My Approvals**. Accept or reject the change.

Weekly count

- Same as every associate: **Stock Counts** → **Start my weekly count sheet**. Type the actual counts and submit.
- Differences open a case with 7 days to explain.

Consignment (menu: Consignment)

- **Send goods to a consignee**, **record consignee sales** (prices filled in from the agreement, editable) or **take goods back**.
- Always save and print the draft first, then submit. The Warehouse In-Charge checks it first; the Owner approves last.

Your pay: My Pay & Charges.

Warehouse expenses (menu: Expenses): record an expense of the warehouse (choose the account, amount and payee). You may also pay from the warehouse **Cash fund** (the balance is shown; you spend it, Accounting / the cash fund holders replenish it), or choose cash on hand, a bank account or an owner advance.

Franchise availability and branch requests: you can edit an availability (offer quantity and flavors, remove items) and prepare what a branch requested, the same as the In-Charge; the In-Charge does the final approval of a franchise order. You can pay warehouse expenses from the cash fund (not set it up).

Warehouse In-Charge

You are responsible for the warehouse stock. You check your associates' entries, and you enter receiving and transfers yourself.

Approving your associates' goods in and out (menu: My Approvals)

- **Goods into the warehouse:**
  - **Supplier deliveries** entered by an associate come to you **first**. Check the goods and quantities against the supplier's delivery receipt, then **Approve** (it goes to the Head Auditor for the cost; the stock is added after that) or **Reject**.
  - **Stock returned to the warehouse** (transfers in): check and **Approve**; the stock is added.
- **Goods out of the warehouse:** pull-outs prepared by an associate. Approve before they go to the auditors or the Owner.
- The document page shows the workflow bar: who approved and who is next.

Your own entries

- Receive supplier deliveries and prepare transfers the same way as an associate.
- Your own entries do not need In-Charge approval. The Head Auditor still approves the cost of every delivery.
- Warehouse sales need no In-Charge approval.

Consignments from your associates

- **Consignment check** requests from Warehouse Associates come to you first; after you approve, the Owner gives the final approval.
- Your own consignments go straight to the Owner.

Correcting an associate's document

- Edit it. The associate must accept your change before it applies.

Transfers received with a different quantity

- When a branch receives less (or more) than your form, the Head Auditor checks it first, then it comes to you in **My Approvals**. Check the shelves and the packing, then **Agree** or **Disagree** with a note within **2 days**. Agreeing makes the **-002** adjustment form automatically; disagreeing sends it to the Owner.
- Goods you receive work the same way: tick what arrived, type the actual quantity of short lines, and add items that are not on the form.

Counts and write-offs

- Count the warehouse (Stock Counts).
- Write off expired or damaged stock; the Head Auditor approves.
- Explain discrepancies within 7 days.

E-commerce (TikTok, Shopee, Lazada)

- **E-commerce pull-outs** come to you in Approvals. They were drafted automatically from the platform's order file.
  1. Open the pull-out and print the picking list (oldest expiry first) with the orders and tracking numbers.

2. Pick and pack, count the items against the list, then **Approve**. You are the only approver.
3. The items leave the Warehouse and wait in "TikTok / Shopee / Lazada – with courier" until the platform pays.

- **Returned parcels** (menu: E-commerce → Returned parcels to receive):
  1. Open each parcel and type how many items are **good** and how many are **damaged or expired**.
  2. Press **Receive**. Good items go back to Warehouse stock. Damaged items come in and a write-off goes to the Head Auditor.

Flavors: set the flavor of old warehouse stock on Stock on Hand → Batches → **Set flavors**. Deliveries record the flavor per line.

Finding transfers: Transfers & Pull-outs → **View** (pull-outs or transfer-ins) and **Branches**: tick the branches to see, for example only the franchises you send to. Franchises show "(franchise)" beside the name.

Reports: Stock on Hand, Inventory Reports (quantities only).

Warehouse expenses (menu: Expenses): you and the Warehouse Associate record the warehouse's expenses (cash fund, cash on hand, bank account or owner advance).

Restocking: you can open every purchase order (Restock & Purchase Orders, view only) and print the **warehouse copy**: per branch, what to pull out now from existing stock and each branch's share when the supplier's delivery arrives. When you receive a delivery for an order, choose it under *This delivery is for a purchase order*.

Franchise availability (menu: Franchise Orders): when the Franchise Coordinator sends an availability, open it, type the **Offer** (quantity and flavors you can give) for each product, remove what you cannot give, and *Send to the Franchise Coordinator*. After the coordinator prints the picklist and your team prepares the goods, do the **final check** and *Approve* (or send back with a note); the coordinator then makes the DR. **Requests from the branches** (Transfers): a branch's request appears with its products already filled in. Edit the quantities (or remove an item) → *Prepare the pull-out*, or *Decline* with a reason. **Cash fund:** you and your associates can pay warehouse expenses from the warehouse cash fund (Expenses → Paid from Cash fund).

Head Auditor

New approvals for you: **stock given out to Prothin Marketing / GWS Marketing / BO** (you may also endorse an approved one to Accounting as an expense), **a replacement given to a customer** (price difference shown), and **items returned to a supplier**. Replacement Tickets lists every ticket; Marketing & BO Pull-outs summarises what was given out. In the Daily Inventory Report press a figure to see the forms behind it.

You approve costs and most corrections, audit the branches, and watch the cash.

Every day: My Approvals

- **Receiving cost:**
  1. Deliveries entered by a Warehouse Associate reach you after the In-Charge has checked the goods (your approval is the last step).
  2. Open the delivery and check or type the unit cost of each line (freebies included). **New products need a cost before you approve**; if one is missing, the system tells you and the delivery stays in your list.
  3. Approve: the stock is added. An unchanged cost approves by itself after 24 hours.
- **Transfers between company locations:** you or the Asst Auditor (either one).
- **Post-close edits of company branches:** you **and** the Asst Auditor (both). You are also told of every request with the person's count this month; three in a month (or three days in a row) is flagged for HR to refer to the Owner.
- **Transfer received with a different quantity:** open it (the transfer page shows the form quantity, what was received and the note). **Confirm the difference** sends it to the sending branch; **Receiver miscounted** gives the receiving branch the items as on the form.
- **Write-offs, discrepancy resolutions, count revisions and discrepancy explanations:** you alone.
  - Explanation accepted → the stock is adjusted and nobody is charged.
  - Explanation rejected → the shortage is charged at franchise price at the deadline.
- **Audit Associate corrections:** you alone. The staff member is notified and the correction goes to the Revision Log.
- **More days to deposit cash:** you **and** the Owner (both).
- **Consignment checks from branch staff:** you or the Asst Auditor, before the Owner's final approval.
- **Cost changes typed by the Owner:** you approve them.

Products and suppliers

- You may edit products and suppliers.
- **Cost:** open a product → **Edit cost** → new cost, effective date and reason → **Send for approval**. The Owner approves it, then the cost-access roles are notified.
- **Days to consume one unit:** set it on the product. It drives the customer re-order reminders.
- **Flavors:** list the flavors of a SKU on the product (for example Choco, Vanilla). New flavors typed at receiving are added by themselves.
- New products and suppliers you create wait for the Owner's approval.
- Only the Owner deletes.

Counts

- Create audit counts for any branch or franchise. Every item is listed, items in the system first.

- Differences open a case: the branch, the auditors, the Owner and HR are notified, and the branch has 7 days to explain.

Cash on hand (menu: Cash on Hand)

1. See every branch's undeposited cash, the overdue days and the oldest day.
2. Set **Days allowed** per branch (how many days after the sales day the cash must be in the bank).
3. You are reminded every morning of cash that is due or overdue.

Daily Sales Reports

- The dashboard lists the branches that have not submitted today's report.
- You are notified when a report was submitted automatically at the cut-off.
- The report's **Audit summary** shows the margin.

Other

- You are notified of supplier cost changes.
- Charge a cash shortage to staff from Daily Close.
- Review store inspections and the Revision Log.

Franchise AR and memos: Franchise AR shows every franchise's invoices; you are told of every payment, change, extension request and two-month flag. You may write memorandums (**Memorandums**).

Restocking: Restock & Purchase Orders → *Generate a restock request* makes one PO per supplier from the days of stock of the warehouse and each branch. Check the suggested transfers (from existing stock first) and the suggested order, change any box, add items, then *Send to the Owner for approval*. After approval, tell the branches to create their pull-outs (the Owner may also ask you to make the transfers). Print the supplier copy (no branches), the internal copy and the warehouse copy.

Proofs of payment: *Payment Proofs* (Reports) shows the proof of every online, card and cheque payment, AR collection, replacement payment and deposit slip of a branch for a day or period, with the missing ones in red. Print it with the pictures, or read the proofs at the end of the printed Daily Sales Report: each sale has a reference (ON-1, CC-2, CQ-1 …) in its Proof column, and the legend tells the type.

Restock override: if the data says nothing is needed you can still order: in *Generate a restock request* tick the supplier and choose *Every item of the supplier* or *A blank order*, then type the quantities and each branch's share yourself.

Promos: choose a **% off** (20–70%) or a fixed price, set the **internal quantity** per product, and use **See promo sales** to monitor sold / left. Every sale on a promo item carries the associate's promo tick.

DRs and Inventory Reports: the Daily Sales Report lists the DRs of the day (click to open, **Edit** while the day is open). In Inventory Reports, click a **Sales** quantity to see the DRs behind it and open the Daily Sales Report of that day.

Asst Auditor

You support the Head Auditor.

Approvals

- Transfers between company locations (you or the Head Auditor).
- Post-close edits of company branches (you **and** the Head Auditor).
- Consignment checks from branch staff (you or the Head Auditor), before the Owner's final approval.

Counts and store checks

- Create audit counts for branches, franchises and the warehouse.
- Confirm the cash fund found in a store.
- Fill store inspection reports.

Watching

- You are reminded of cash on hand that is due or overdue (menu: Cash on Hand).
- You are notified of count discrepancies and of Daily Sales Reports not submitted by the cut-off.

Entering on behalf of a branch

- You may record sales, expenses, receiving and transfers when needed. They follow the same approvals as the branch's own entries.

DRs and Inventory Reports: the Daily Sales Report lists the DRs of the day (click to open, **Edit** while the day is open). In Inventory Reports, click a **Sales** quantity to see the DRs behind it and open the Daily Sales Report of that day.

Audit Associate

You review branch reports (with supplier cost) and ask for corrections.

1. Read the Daily Sales Reports, inventory reports and documents of any branch.
2. **Correcting an error:**
    1. Open the sale or transfer and use **Request a correction**.
    2. Choose what to correct, type the new value and the error found, then send.
    3. The staff member who made it is notified. Only the Head Auditor approves.
3. The **Revision Log** counts errors per staff member.
4. You are notified of count discrepancies, cash on hand that is due, and reports not submitted by the cut-off.

Proofs of payment: *Payment Proofs* (Reports) shows the proof of every online, card and cheque payment, AR collection, replacement payment and deposit slip of a branch for a day or period, with the missing ones in red. Print it with the pictures, or read the proofs at the end of the printed Daily Sales Report: each sale has a reference (ON-1, CC-2, CQ-1 …) in its Proof column, and the legend tells the type.

Inventory Reports: click a **Sales** quantity to see the DRs behind it, each linked to the sale and to the Daily Sales Report of that day.

Field Auditor

You visit stores. You see the inventory of every location without cost, and you never see sales.

1. **Audit count:**
    1. Stock Counts → choose the branch, franchise or warehouse → **Create count sheet**.
    2. Every item is listed, the ones in the system first. Type the actual counts and **Submit count**.
    3. Differences open a case. The branch staff, the auditors, the Owner and HR are notified, and the branch has 7 days to explain.
2. **Cash fund check:** Petty Cash Fund → choose the branch → type the cash found → **Confirm count**.
3. **Store inspection report:**
    1. Store Inspections → **New** → choose the branch and the staff on duty.
    2. Fill the 19 checklist items and add comments.
    3. Press **Submit to HR**. The staff member acknowledges it and HR reviews it.

Franchise Sales Associate

You sell at a franchise. You never see franchise cost.

1. **Sales:** record each sale in **New Sale** the same way as a branch associate. You cannot change prices.
2. **Deliveries from GWS:**
    - If your franchise owner allows it, open the incoming transfer, tick what arrived and **Confirm**. The owner is notified.
    - If not, only the owner confirms.
3. **Weekly count:** Stock Counts → **Start my weekly count sheet** → count → submit. Differences open a case with 7 days to explain.
4. **Your pay:** My Pay & Charges shows only your own salary and charges, set by your franchise owner.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Franchise orders and DRs: you can order from an availability and see the DRs for your franchise. You can confirm a DR's receipt only if your franchise owner allows associates to receive stock.

Franchise Owner

You run your franchise. Everything you see is limited to your own branch (every sale, transfer, expense and invoice of your franchise, and no other), and you create your own sales and expenses. Your books are separate from the other GWS branches. Shipping that GWS charges you for a sale appears on **Franchise AR** as its own invoice.

1. **Franchise Portal → Overview:** stock, incoming deliveries, today's sales and what you owe GWS.
    - Switch **"associate may receive stock"** on or off. With it on, your associate confirms deliveries and you are notified.
2. **Staff pay & charges:**
    - Record each associate's salary; it becomes your franchise expense, and only you see it.
    - Create charges for your own staff and branch. GWS HR has no access.
3. **Income statement & balance sheet:** choose the dates. Only your branch is included.
4. **Expenses:** add franchise expenses (rent, utilities…); they appear in your statements.
5. **Corrections:** post-close edits at your franchise come to you for approval.
6. **Prices:** Price updates on your dashboard show only your franchise price.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Franchise AR (what you owe GWS): open **Franchise AR**. Every delivery is billed at the franchise price when you receive it and is due 30 days later. After the due date a **2% penalty (once) and 0.1% a day** on the unpaid balance are added (memo of July 31, 2026). You can see each invoice, how the amount is worked out, your payments and any changes.

- **Changes:** if the quantities change after receiving (a difference is resolved by the auditors / Owner), your invoice changes by itself and you, the Owner, auditors, Accounting, the Franchise Coordinators and the sales associates involved are notified.
- **Need more time?** Press **Ask for extension**, choose the new date and give the reason. The Owner decides; the auditors, Accounting and the Franchise Coordinators are flagged. No new penalty or interest is added until the new date.
- Unpaid two months after the due date, the account is flagged and the company may issue a demand, suspend credit, or ask for cash before delivery.
- Sales paid by credit card are priced at the credit-card price automatically.

Franchise orders: when the Franchise Coordinator sends the availability you get a notice. Open *Franchise Orders*, type **I order** (quantity) and choose the flavors, then *Send my order*. **Franchise DRs:** every DR made for your franchise (from the warehouse or any main branch) is listed; check the goods and *Confirm receipt* (your stock goes up) or *Report a problem* with a note; the coordinator corrects the DR. **Franchise AR** shows *Unpaid goods (DRs)* with the DR behind each.

Accounting Head

You accept **pull-outs endorsed as an expense** (booked at cost) and are told of every replacement ticket, price difference and supplier replacement (Replacement Tickets, Marketing & BO Pull-outs).

You keep the books.

1. **Journal Entries:** every entry links to its source document. Automatic posting is switched on in Settings.
2. **Correcting an entry:**
    1. Open the voucher and press **Edit entry**.
    2. Change the lines: they must balance, no negatives, and the period must be open.
    3. Give the reason. The maker, the source document's maker and the Owner are notified, and the change is logged.
3. **Trial Balance**, **Periods & Opening** (request a period lock; the Owner approves) and **Inventory Cost**.
4. **AR payments** entered by branches wait for you or the Accounting Associate in **My Approvals**. Each one shows the customer, the amount, how it was paid, the **account it was deposited to**, the invoices and the **proof of payment** (click the picture to enlarge it).
    - **Approve** when the money is in the account.
    - **Reject** asks for the reason: wrong amount, wrong proof, proof unclear, money not received, wrong account, wrong customer or invoice, duplicate, wrong date, cheque bounced or not cleared, or another reason you type. The branch sees it.
5. **Agent incentives** (menu: Agent Incentives): approve the monthly incentive the Sales Manager confirmed (in My Approvals, with the Accounting Associate; the Owner approves last). When HR has the agent's signature, press **Tag as released**: how it was paid (bank transfer, GCash, cheque or cash), the account, the reference and the date.
6. **Opening AR (credit from before GWS-ERP)** (menu: AR & Collections → Opening AR):
    1. Press **+ Enter opening AR**. Choose the branch, the customer type (Dealer, Franchisee, Agent or Other) and the customer.
    2. Type the DR / SI no., the invoice date, the due date and the balance still owed. Tick **There is a PDC** only if there is a cheque, then type the bank, cheque no. and date.
    3. Press **Send for the Owner's approval**. Enter the next one; the branch, type and date stay filled in.
    4. After the Owner approves, it appears in that branch's AR & Collections and the branch is notified. Rejected entries show the Owner's reason.
    - Many invoices at once: Imports → **Open AR** (same approval).
    - It is not posted to the books again: the AR beginning balance is already in Periods & Opening.
7. **Payroll:** close HR's finalized runs by choosing the paying bank account.
8. **Bank & Office:** record main bank transactions, with the bank or **Gcash (GWS)** account and the book they belong to.
9. You are notified of supplier cost changes.
10. **E-commerce payouts** (TikTok, Shopee, Lazada) come to you in Approvals.
    1. Check that gross sales − seller discounts − fees − refunds − withholding tax = the payout. **Open full document** shows the order list and any orders left out.
    2. Compare the payout with the platform wallet or the bank, then **Approve**.

3. The sale, each fee, the creditable withholding tax and the payout (to the platform's cash account) are posted, together with the cost of goods sold.

- When the money is withdrawn to the bank, record the transfer in Bank & Office.
- E-commerce → **All platforms: profit report** compares TikTok, Shopee and Lazada.

Franchise AR: open **Franchise AR** to see each franchise's invoices, penalty and interest. Press **Record payment** when a franchise pays: choose how it was paid, the account it went to and the reference. The payment settles the penalty first, then the interest, then the goods. Everyone concerned is notified. Old franchise balances are entered through **AR / Credit → Opening AR** (kind Franchisee); they become franchise invoices.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Purchase orders: you can view every purchase order (Restock & Purchase Orders); it books nothing. The delivery and its approved cost do.

Proofs of payment: *Payment Proofs* (Reports) shows the proof of every online, card and cheque payment, AR collection, replacement payment and deposit slip of a branch for a day or period, with the missing ones in red. Print it with the pictures, or read the proofs at the end of the printed Daily Sales Report: each sale has a reference (ON-1, CC-2, CQ-1 …) in its Proof column, and the legend tells the type.

Franchise AR: each franchise shows Total goods AR, Total shipping AR, Total penalty and Total interest AR apart. Goods delivered on a DR and not yet paid show as **Unpaid goods (DRs)** (click one to open the DR) and earn the 2% penalty and 0.1% daily interest after the due date, by themselves. A due date before the sale date is refused. You can see Franchise DRs.

Inventory Reports: click a **Sales** quantity to see the DRs behind it, each linked to the sale and to the Daily Sales Report of that day.

Accounting Associate

You accept **pull-outs endorsed as an expense** in My Approvals (booked at cost) and are told of every replacement ticket, its price difference and when it is settled (Replacement Tickets, Marketing & BO Pull-outs).

1. **AR payments** entered by branches: approve or reject them in My Approvals.
2. **Agent incentives:** approve them in My Approvals, and **Tag as released** on Agent Incentives once paid (mode, account, reference, date).
3. **Opening AR (credit from before GWS-ERP):** AR & Collections → Opening AR → **+ Enter opening AR** for any branch (branch, customer, DR / SI, invoice date, due date, balance, PDC if any) → **Send for the Owner's approval**. Once approved it shows in the branch's AR.
4. **Journal Vouchers:** view entries and correct them with **Edit entry** (balanced, no negatives, open period). The people involved and the Owner are notified.
5. **Bank & Office:** record bank transactions and see balance-sheet account balances.
6. **Payroll:** you see totals only. Record government contribution payments.

Franchise AR: open **Franchise AR** to see each franchise's invoices, penalty and interest. Press **Record payment** when a franchise pays: choose how it was paid, the account it went to and the reference. The payment settles the penalty first, then the interest, then the goods. Everyone concerned is notified. Old franchise balances are entered through **AR / Credit → Opening AR** (kind Franchisee); they become franchise invoices.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Proofs of payment: *Payment Proofs* (Reports) shows the proof of every online, card and cheque payment, AR collection, replacement payment and deposit slip of a branch for a day or period, with the missing ones in red. Print it with the pictures, or read the proofs at the end of the printed Daily Sales Report: each sale has a reference (ON-1, CC-2, CQ-1 …) in its Proof column, and the legend tells the type.

Inventory Reports: click a **Sales** quantity to see the DRs behind it, each linked to the sale and to the Daily Sales Report of that day.

HR Staff

You handle people: employees, accounts, pay, charges and notices. You have no access to inventory, sales or franchise payroll.

1. **New employee** (Payroll → Employees → Add employee):
    - Choose a company branch (not a franchise). It waits for the Owner's approval.
2. **User account:**
    1. Open the approved employee → **Create user account…**.
    2. Type the username and choose the role and branch. Email is optional.
    3. Press **Generate** for a temporary password, then send. The Owner approves.
    4. Give the person the username and temporary password.
3. **Payroll run:**
    1. Create the run for the period.
    2. Check overtime, incentives, loans and charge deductions, then **Finalize**.
    3. Accounting closes it. Print payslips.
4. **Contributions:** SSS, PhilHealth and Pag-IBIG register per employee; record each remittance.
5. **Staff Charges:**
    - Charges from discrepancies, write-offs and cash shortages arrive here automatically.
    - Split each one between the staff, set the pay periods and **Finalize**.
    - Print the Charge Form and the Salary Deduction Authorization.
6. **HR Notices (NTE):** when a branch did not deposit its cash on time, a notice lists the amount, the dates and the staff on duty.
    - Issue the NTE, then **Mark NTE issued**; **Close** it when settled.
7. **Post-close edits:** each one a branch person asks for comes to HR Notices (one notice per person per month, with the list and the reasons). From the **third in a month, or three days in a row**, it is marked red: press **Refer to the Owner**.
8. **Transfer differences:** every confirmed difference between a transfer form and what arrived comes to HR Notices with the person answerable (who prepared the form, or the receiver who miscounted) and how many cases they had in 30 days. The Owner decides any action.
    - From the **third** case of the same person in 30 days, the notice is marked in red: press **Refer to the Owner** for a more serious consideration.
9. **Agent incentives** (menu: Agent Incentives): when the Owner approves an incentive, its release form (AI-000001…) comes to you. **Print form**, have the agent sign it, then press **Agent signed**. Accounting then releases the payment and tags it.
10. **Watching:**
    - Weekly Count Check shows who did not submit a count sheet.
    - You are notified of count discrepancies, explanations and Daily Sales Reports not submitted by the cut-off.
    - The Error Log shows errors per staff member.
    - Review store inspection reports.

Memorandums: open **Memorandums → Write a memo**: choose who it is for (everyone, franchise owners, franchise associates, a role, a branch or named people), type the subject and the memo, add a table if needed and add the people who sign. The memo gets its number by itself (2026-Q3-046) and everyone addressed is notified and confirms reading. Print it on the company letterhead with **Print / download PDF**. **New users and employees:** you are notified whenever the Owner or anyone opens a user account or an employee record, so HR always knows who is in the system.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Executive Assistant

You record main office bank transactions. You do not see cost, branch reports or income.

1. **Bank & Office → Bank entries:**
    1. Choose the bank account (including **Gcash (GWS)**) and whether money came in or went out.
    2. Choose the book (advances to, advances from, supplier payables, office expense, receivables, fixed asset, equity or bank transfer) and the account.
    3. Type the amount, the payee or source, and the reference, then save. A journal voucher is created.
2. **Supplier payables** and **Office expenses:** view only.
3. **Balance sheet accounts:** the balance of each account.

External Auditor

You can read everything, including cost, payroll and the financial statements, but you cannot change or approve anything.

1. Financial Statements, Trial Balance, Journal Vouchers, inventory and sales reports, payroll, and the Audit Log (who did what).
2. You are notified of supplier cost changes.

Admin (Owner)

New this month: **Users & Roles has a search box** (name, username, role, branch, ID). You are told of every replacement ticket and of marketing / BO pull-outs, and may decide anything the Head Auditor decides. Unfinished drafts can be deleted by you.

You see and can do everything. You are the final approver.

1. **My Approvals:**
    - **New master data:** products, suppliers, customers, branches, accounts, employees, user accounts and imports that others entered.
    - Transfers to franchises, special prices, price changes and period locks.
    - More days to deposit cash (with the Head Auditor).
    - **Consignments** (final approval after the manager's check) and **cost changes** typed by the Head Auditor.
    - **Transfer differences** the sending branch disagrees with or did not answer in 2 days: open the transfer and choose: the difference stands (-002 form back to the sender), received after all, lost as a company expense, or lost and charged to staff.
    - **Sales targets** set by the Sales Manager.
    - **Opening AR** (credit from before GWS-ERP) entered by Accounting: check branch, customer, DR / SI, dates and amount, then approve. It then appears in that branch's AR and the branch is notified.
    - **Anything waiting with someone else:** tick **Show everything waiting**. As the Owner you may approve any request; your decision is final (the workflow shows "Owner (final)").
    - **Agent incentives** after the Accounting Associate and the Accounting Head.
    - **Faster approvals:** every group has **Tick all** and **Approve all**; **Select all** at the top ticks everything, then **Approve selected**. Each item still shows its own result (for example a delivery whose new product needs a cost stays in the list).
2. **Users & Roles:** create accounts (one per person), change roles and branches, tick extra permissions, reset passwords. Your own new records are created at once.
3. **Deleting:** only you delete products and back-office data. A record already used is archived instead.
4. **Consignees** (Catalogue → Consignees):
    - **New consignee:** name, who pays at (retail price, consignee price or agreed cost), payment terms, contact and address. The stock location, customer, receivable account and agreement are created in one step.
    - Add suppliers who consign goods to GWS on the same page.
5. **Cost and days to consume:** edit a product's cost directly (the Head Auditor approves) and its days to consume.
6. **Customer messages** (Settings): write the SMS and email sent to customers who may have finished their supplements, and switch automatic sending on or off.
7. **Settings:** thresholds, automatic posting, and the letterhead and logo on every form.
8. **Watching:**
    - The dashboard shows cash on hand per branch, branches without today's report, discrepancies and price updates (cost included).
    - HR Notices are visible to you too.
9. **Reports:**

- **Sales Graphs:** every branch's month-to-date running total in its own colour, the company total, and each month of the year.
- **Sales Report:** any branch or all, any period, with gross profit.
- Financial Statements, all branch reports with margin, and the Audit Log.

10. **E-commerce** (menu: E-commerce):
    - **All platforms: profit report** shows TikTok, Shopee and Lazada side by side: net sales, each fee, ads, cost of goods and the profit before overhead.
    - Overdue orders (shipped but neither paid nor returned) reach you every Friday.
    - The E-comm Associate's account is created in Users & Roles with the role **E-comm Associate** (no branch).

Pricing (new): E-com & Card Prices holds the credit-card price rule (fee % and whether it is SRP ÷ (1 − %) as in the price memo, or SRP + %) and the TikTok / Shopee / Lazada price lists from the masterlist; change any price or import the masterlist again. Lazada follows Shopee until it has its own prices. Amounts keep their centavos. **E-com Margin Analysis (new):** each platform's fees and charges, ads, cost of goods and the margin left against your target; for every product the margin at the platform price and the price that keeps the target. Add ad expenses at the bottom of the page. **Franchise AR:** record waivers of penalty / interest, decide extension requests (in **Approvals**) and put a franchise on cash-before-delivery. **Memorandums:** yours always carry AL MARVIN VINLUAN (President) and MICAH VINLUAN (Manager). Adding an employee or a user notifies HR.

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Restocking: the Head Auditor sends you purchase orders (My Approvals or Restock & Purchase Orders). Each shows days left per branch, the suggested transfers from existing stock and the suggested order; you may change any number, then Approve or Reject with a note. You may also generate one yourself (approved at once). *Ask the Head Auditor to make the transfers* tells the Head Auditor, the Warehouse In-Charge and the branches. Print the internal copy; the supplier copy shows no branches or prices. Mark as sent with the expected delivery date; a delivery linked to the order shows received against ordered.

Promos: the same as the Head Auditor (% off 20–70%, internal quantity, See promo sales). **Franchise DRs:** you can see every franchise DR and whether the franchise has confirmed it. **Cash fund:** set the warehouse and every branch fund under Cash Fund; warehouse staff may spend from theirs.

DRs and Inventory Reports: the Daily Sales Report lists the DRs of the day (click to open, **Edit** while the branch has not submitted the day). In Inventory Reports, click a **Sales** quantity to see its DRs and open the Daily Sales Report of that date.

E-comm Associate

Upload the platform's **To ship** export (no seller SKU needed): you get one pick list, product suggestions for new items, and can send it to the In-Charge right away; then upload the waybill PDFs. When you search for a product on the E-commerce pages, the products that have a **TikTok, Shopee or Lazada price come first**; those with no platform price are listed at the bottom.

You run the online shops: **TikTok Shop, Shopee and Lazada**, each on its own tab. E-commerce has no stock of its own: every item comes from the Warehouse, and the Warehouse In-Charge approves each pull-out. You see selling prices and platform fees, never cost.

Every morning: orders to ship → pull-out (menu: E-commerce → choose the platform → 1. Orders → pull-out)

1. In the platform's seller centre, open the orders **to ship** and **Export** them (Excel or CSV). A waybill list export works too.
2. Press **Choose file and upload**.
    - Every new order goes on one **draft pull-out** from the Warehouse. Items are totalled by SKU and the oldest expiry is picked first.
    - Orders already uploaded and cancelled orders are skipped, so an order is never pulled out twice.
3. **New SKUs:** when the platform's Seller SKU is not the GWS SKU, pick the matching GWS product once. The match is remembered (tab **SKU matches**). Then press **Upload the same file again**.
4. **Not enough stock** in the Warehouse: those orders are listed and not added. Upload the file again when stock arrives.
5. Open the draft:
    - Remove an order that was cancelled (the items are re-totalled).
    - **Print picking list**: items, batches, expiry, and the orders with their tracking numbers.
    - Press **Submit to the Warehouse In-Charge**.
6. When the In-Charge approves, you are notified. Hand the parcels to the courier with their waybills. The orders are now **Shipped, not yet paid**.

Each payout (usually weekly): (tab: 2. Payouts)

1. In the seller centre, open **Finance** (TikTok: Statements; Shopee: Income; Lazada: Transaction overview) and export the payout.
2. Upload it. GWS-ERP reads the sale, each fee (commission, transaction or payment fee, shipping, affiliate commission, other fees), refunds, the withholding tax and the payout of every order.
3. Check the summary:
    - The payout must equal the money the platform released (**✓ Net sales − fees − refunds − tax = payout**).
    - Orders not in GWS-ERP (for example shipped before you started using it), not shipped yet, or already paid are listed apart and left out. Tick **Also book orders not in GWS-ERP** before uploading if you want their money booked (no stock moves).
4. Press **Send to Accounting**. The Accounting Head approves, and then the sale and the fees are posted.

- If your file does not read well, download the **GWS payout template**, copy the amounts into it and upload that.

When a parcel comes back (tab: 3. Returns)

1. Scan or type the **order ID or tracking number** and choose the reason (failed delivery or buyer return), then **Record the return**.

2. Give the parcel to the Warehouse In-Charge. The In-Charge marks each item good (back to stock) or damaged (write-off).

Every month: ads (tab: 4. Ads)

- Download the ads billing / invoice from the platform's ads centre and upload it. Amounts are added up per month.
- Or type the month and amount.
- Choose how the ads were paid: from the platform balance (deducted from sales) or by a bank or card account.

Every Friday: Order tracker

- Filter **Overdue**: orders shipped more than 30 days ago and neither paid nor returned. Follow each one up with the platform, or file a lost-parcel claim. You are reminded every Friday.

Report (tab: All platforms: profit report)

- Choose the dates. It shows TikTok, Shopee and Lazada side by side: net sales, each fee, ads, what is left after fees and ads, fees as % of sales, return on ad spend, returns and payouts.

The platform price lists (TikTok, Shopee, Lazada) are set by the Owner in **E-com & Card Prices**; you see the platform prices for your own work. Change your password with the key icon at the top right.

Sales Manager

You follow the sales of every branch, agent and e-commerce platform, and you set the monthly targets. You never see cost, margin, supplier data, cash counts, payroll or the books, and you do not record sales or money.

Every morning (menu: Dashboard)

- **Sales vs target this month**: how much of the company target is done, compared with how much of the month has gone.
- **Receivables by due date**: dealers, franchises and agents who have not paid, the nearest due first.

Setting targets (menu: Sales Targets)

1. Choose the month.
2. Under **Set a target**, choose a branch or an agent, type the target sales in pesos and an optional note.
3. Press **Send for the Owner's approval**. The target applies once the Owner approves; until then it shows "waiting for the Owner".
4. To change a target, send a new one; the approved one is replaced when the Owner approves the new one.

Following achievement (menu: Sales Targets)

- Each branch and agent shows its target, the sales so far and the % achieved.
- The dark line on each bar is how much of the month has gone. **Green** = on track, **amber** = slightly behind, **red** = behind.
- An agent listed at several branches counts as one person: all their sales add up.

Agent incentives (menu: Agent Incentives)

1. Choose the month. Each agent's total sales (every branch), what is collected and what is unpaid are listed.
2. Type the incentive as a % of sales or as an amount and press **Confirm**.
3. It goes to the Accounting Associate, the Accounting Head and the Owner. After the Owner approves, the release form goes to HR, and Accounting tags the payment. You are told at each step.

Wheysted members and campaigns (menus: Wheysted Members, Email & SMS)

1. **Wheysted Members:** every member with what they buy, how often, how much and when they last bought. Click a title to sort, use the filter under it, or choose a segment (VIP, Frequent, At risk, Lapsed, New, Never bought, Birthday). **Who bought this item** lists the customers of one item. **Make members from my sales** turns the customers already in your sales into members.
2. **Email & SMS:** choose the audience (members, or everyone in the database; a segment; those who bought an item), **Count who will receive it**, write the message with {firstName}, send a test to yourself, then **Prepare campaign** and **Send**. Unsubscribed people are left out automatically.

Customer Service and promos (menus: Customer Service, Promos)

1. **Customer Service:** the branches' to-do lists (restock due, birthdays of regulars, regulars who stopped coming) and the results they recorded. **Why they do not buy again** adds up the reasons by branch, item and staff member.
2. **Promos:** see the promos running for the branches and the franchises. The Owner and the Head Auditor issue and cancel them.

Member program (menu: Wheysted Members)

1. **Top spenders:** call the best customers who have not been contacted for 30 days and press **Log a call**.

2. **Insights:** when customers buy (heat-map), where members come from, and how many sales carry a member by branch and by associate. **Feedback:** ratings and comments; low ratings arrive as notifications.
3. **Member prices** and **Program rules** (points, tiers, vouchers, automatic birthday / win-back / re-order / rating messages: switch on what you want). **Lost sales:** what customers asked for and we did not have.
4. **Campaigns** also make WhatsApp / Viber / Messenger lists for the staff, can give each person a voucher, and show who bought afterwards.

Outlets, itineraries and consignments of your agents (menus: Outlets, Field Monitoring, Agent Consignments)

1. **Outlets → Waiting for approval:** the outlets the agents uploaded (with contact person, number, email, picture). Tick and **Approve**, or **Reject** with the reason. Only approved outlets can be tagged on sales and itineraries.
2. **Outlets → Change requests:** an agent cannot change an approved outlet alone; approve or reject their request. The Owner is told of every change.
3. **Outlets → Areas:** create areas and assign each to an agent. Open an outlet to move it to another area or agent, **share** it with another agent, or **Remove outlet** (the Owner approves; the outlet must have no order in the last 3 months).
4. **Field Monitoring:** every agent's itinerary with the photos, times and locations; scorecards; sales per area; outlets not ordering; approve or reject fuel / transport claims (Accounting is then told to pay).
5. **Agent Consignments:** link each consignee account to an agent's outlet, then set the **maximum** for the agent (all outlets) and, if wanted, for one outlet: **Send for the Owner's approval**. A consignment that would go over a maximum is stopped.

Agent accounts (menu: Sales Targets → Agent accounts)

- Link each agent to their **Agent** user account (the Owner creates it in Users & Roles). The agent then sees their own sales and target.

Other screens (view only)

- **Sales Report** and **Sales Graphs**: any branch and period; no profit or cost.
- **Sales List**, **Daily Sales Report**, **AR & Collections** (who owes what, due dates), **Customers & Follow-ups**, **Products & Prices** (selling prices only).

Your password: press the key icon at the top right (**Change my password**) any time. Your account is personal and you answer for everything done under it, so never tell your password to anyone, not even HR, your supervisor or the Owner. Nobody can see it.

Agent

You see only your own sales, wherever the items came from, and your own target. You never see cost or other people's sales.

1. **Dashboard:** your sales this month, % of your target, and how much your customers still owe.
2. **My Sales:**
    - Choose the month. Your sales at every branch are listed (date, branch, DR/SI, customer, how they paid, amount).
    - **My target** and **Achieved**: green when you are on track for the days gone, red when behind.
    - **Customers who have not paid yet**: nearest due date first; red = overdue. Follow them up and remind them of their PDC dates.
    - **This year, month by month**: your sales per month.
3. **Agent Incentives:** your incentive per month, its status (waiting for approval, with HR to sign, released) and how it was paid.
4. If My Sales says your account is not linked, ask the Sales Manager to link it.
5. **Products & Prices:** retail and agent prices.
6. **Outlets:** add the gyms / stores in your area (**+ Add an outlet** or **Upload Excel / CSV**) with the contact person, number, email and a picture. The Sales Manager approves them; you see only yours and the ones shared with you. To change an approved outlet, press **Ask for a change** (the Sales Manager approves). Open an outlet to see its **orders** (the sales associates tag the outlet on the sale) and visits.
7. **My Itinerary** (best on your phone): plan the stores of the day (or upload a Date / Outlet file), then at each store **take a photo** (required), choose the shelf check and press **Visited**; allow location when asked. Not visited: **Missed** with the reason. Press **Submit the report for this day** at the end. Claim fuel / transport under the stores.
8. **Agent Consignments (My Consignments):** the consignments you are responsible for, what the consignees owe, how long since they reported sales, and how much of your **maximum** is used. A new consignment over your maximum is stopped until the Owner approves a higher one.

Franchise Coordinator

You look after the franchise partners. You never see cost.

1. **Franchise AR:** see each franchise's invoices, penalty (2% once) and interest (0.1% a day) after the due date, payments, changes and extension requests. You are notified of every event: new invoice, payment, change in quantities, extension request, overdue reminders and the two-month flag.
2. **Recommended process** (shown on the page): day 1 automatic notices; from day 7 call the owner and issue a notice memo; from day 30 the Owner reviews and may put the franchise on cash-before-delivery; at two months a demand memo and the actions the memo allows.
3. **Memorandums:** write memos to franchise partners and their associates. Choose the addressees, type the memo (a table is optional), add the signers. The memo is numbered by itself and everyone addressed is notified; print it on the letterhead. **Write the demand memo** on the Franchise AR page fills in the notice for you.
4. **Transfers and stock:** you can see what was sent to and received by each franchise, and the discrepancies.
5. **New Sale (from the warehouse):** record a sale from the warehouse, to a franchise or any other customer, any channel and payment mode. The warehouse is chosen for you; you cannot sell from a branch. The franchise price and the plastic prices (L ₱4, M ₱3, S ₱3, XL ₱5) fill in by themselves and can be changed.
6. **Shipping charges to franchises:** on Franchise AR, **Fill in the amount** within **2 days** of the sale (a late one is flagged to you, the Owner, the auditors and Accounting every day). Filling it creates a separate franchise invoice. To change the amount afterwards, or to ask for more time, press **Ask to change / Ask for more time**: the Owner decides.
7. **Your password:** press the key icon at the top right. It is personal; never tell it to anyone.

Franchise availability and orders (menu: Franchise Orders): (1) *Generate availability* from the warehouse stock → send to the warehouse; (2) the Warehouse In-Charge edits it and sends it back; (3) read it and *Send to the franchises*; (4) each franchise orders its quantities and flavors; (5) open an order → *Make the picklist* → print the PDF → *Send to the warehouse for the final check*; (6) when the warehouse approves, *Make the DR*. **Franchise DRs:** every DR for a franchise (from the warehouse or any main branch) is sent to the franchise to confirm. If the franchise reports a problem, open the sale and *Correct this franchise DR* (same number and date). **Franchise AR** shows Total goods AR, Total shipping AR, Total penalty and Total interest AR apart, and lists *Unpaid goods (DRs)* with their penalty and interest: click one to open the DR.

Asst. Franchise Coordinator

You help the Franchise Coordinator with the same screens: **New Sale** (from the warehouse), **Shipping charges to franchises** (fill in the amount within 2 days; ask the Owner to change it), **Franchise AR** (invoices, penalty, interest, extension requests, notifications), **Memorandums** (write, sign, track who has read them) and the franchise stock transfers. You never see cost. Change your password with the key icon at the top right.

Franchise Orders and Franchise DRs: you can generate availability, send it to the franchises, make the picklist and the DR, and correct a franchise DR, the same as the Franchise Coordinator.

Other users (custom permissions)

Your screens depend on the permissions the Owner ticked for you. Under **More topics for my role** you will find the step-by-step sections for each screen you can open. Ask the Owner if you need another screen.

Appendix · Sample accounts

Everything runs on the office computer at **http://localhost:5173** while `pnpm dev` is running. Every sample account uses the password `ChangeMe!2026`. Each account belongs to one person; the first time you sign in you set your own password and accept the accountability statement.
